SEC HEAT EXCHANGERS QUOTE FORM	87

Description Of SEC Heat Exchangers

Counter flow units made of stainless steel used in both heating and cooling systems.
 Non-removable parts. Ideal for steam or water heating systems.
 Helically corrugated tubes coiled in a spiral tube bundle.
 Vertical installation reduces space requirements.

Where They Can Be Installed

- Heating systems
- Chilled water systems
- Ground water systems
- Residential use

Advantages Of SEC Heat Exchangers

Low maintenance: helically corrugated tubes cause turbulence which results in an increase in heat transfer efficiency and in reduction of scale buildup and fouling.

Compact size and light weight requires less installation space and low installation costs.

Flexibility of design: wide range of types and configurations. Increase or decrease required capacity by adding or removing units.

Flexibility of conditions: wide range of pressures, flows and temperatures.

Low cost of maintenance: compact, lightweight and can be easily removed from piping systems and flushed if necessary.

High efficiency: helically corrugated tubes dramatically increase efficiency of heat transfer in comparison to existing plate or shell & tube heat exchangers.

Our heat exchangers are designed, tested, and manufactured to ASME Code Sec. VIII, Div.1 and will bear U or UM stamp accordingly. SEC heat exchangers are certified by many international and national technical inspection authorities. The heat exchangers are CSA approved, ISO-9002 registered and have obtained the CRN in the Canadian provinces.

SEC Heat Exchanger Technology

SEC heat exchangers were designed with the end-user in mind, a high efficiency shell and tube heat exchanger fabricated from stainless steel 316L that is flexible to use in a wide range of capacities and applications. Its unique features include circular layers of helically, corrugated tubes, a compact design and connection angles ranging between 100°-105°.

Turbulent flow is the dominant mode of fluid flow through the heat exchanger. Whereas in a laminar flow the flow structure is characterized by smooth motion of fluid layers with no mixing of adjacent fluid layers, a turbulent flow is characterized by random, three-dimensional motion of fluid particles. The mixing of fluid layers is a result of velocity fluctuations present in turbulent flow.

Turbulent flow, or mixing of fluid layers, is desired in the heat exchangers. It provides a better mixing, or distribution, of heat in both the shell and tube. The random movement of fluid particles also reduces deposit buildup by performing a “scoop ‘n lift” action with debris lodged along the heat exchanger surfaces. Although turbulence is a direct function of the density and viscosity of the fluid, the flow velocity, and size of the tubes, the corrugated tubes inside SEC heat exchangers induces more turbulence to the flow due to its “bumpy” shape. As a result, the heat exchangers are highly efficient units and may be categorized as self-cleansing.

SEC heat exchangers differ from other shell & tube heat exchanger by the shape and placement of the corrugated tubes inside the shell. The tubes are fabricated into helical coils. The coils are placed inside each other to form circular layers that makes up the tube bundle. Each layer flows in the opposite direction to the layers surrounding it resulting in an overall crisscross pattern.

This design offers many advantages over the conventional, straight tube heat exchangers. The large number of tubes closely packed together provides a large heat transfer area within a compact space, resulting in higher performance at a relatively lower cost. The layers of tubes in the criss-cross pattern provides rapid and more uniform heating of fluids which increases the overall heat transfer coefficient.

The heat exchangers are designed for vertical installation. This, along with their compact size, enables them to be installed in any application. The design requires less installation space and low installation costs.

Depending on the type of heat exchanger, the center-to-center angle of the connections ranges from 100° to 105°, not the traditional 90° angle. This forms a gradual flow entrance and reduces any sharp corners where flow separation may occur, resulting in an appreciable head loss. The entrance angle also prevents debris from lodging in corners, which often occurs with sharp corners.

Construction Features

The heat exchangers are designed and fabricated as a single unit with non-removable parts.

The cylindrical shell encloses a tube bundle, which consists of circular layers of helically, corrugated tubes.

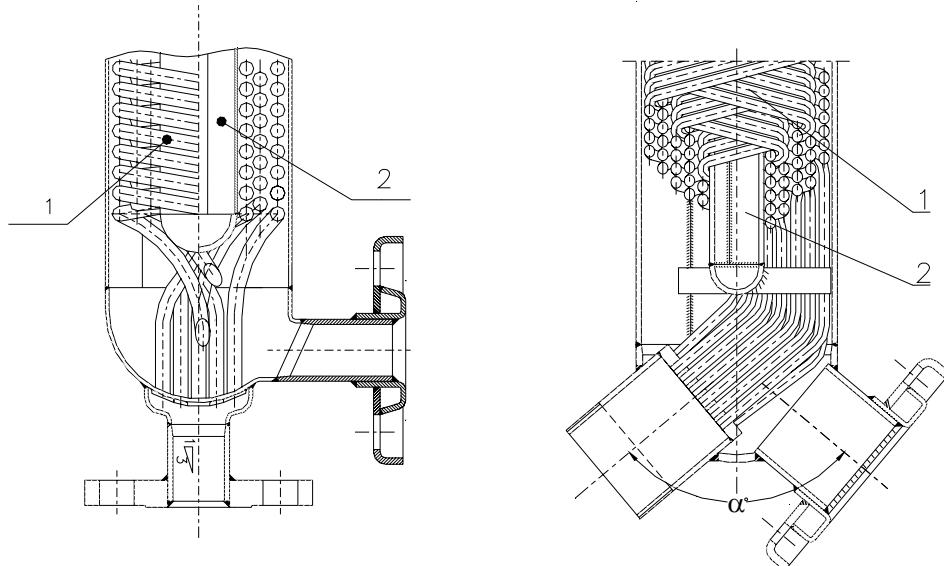

Figure 1 Cross-section of C.xx.xx.90 (left) and C or Pxx.xx.50 (right) type heat exchangers. 1-Tube bundle, 2-Core

Each layer flows in the opposite direction to the layers surrounding it in a criss-cross manner. The tube bundle has perforated bottoms which are welded near the connections. Both ends of the cylindrical shell are enclosed within hemispherical heads.

P-type heat exchangers consist of tube bundles made of smooth tubes. **C-type** heat exchangers consist of tube bundles with corrugated tubes. **CS-type** heat exchangers are shortened versions of the C-type and are usually installed in applications where there are height limitations. C.xx.xx.90 type heat exchangers have straight, 90° angle connections. C.xx.xx.50 type heat exchangers have connections at 50° from the central axis.

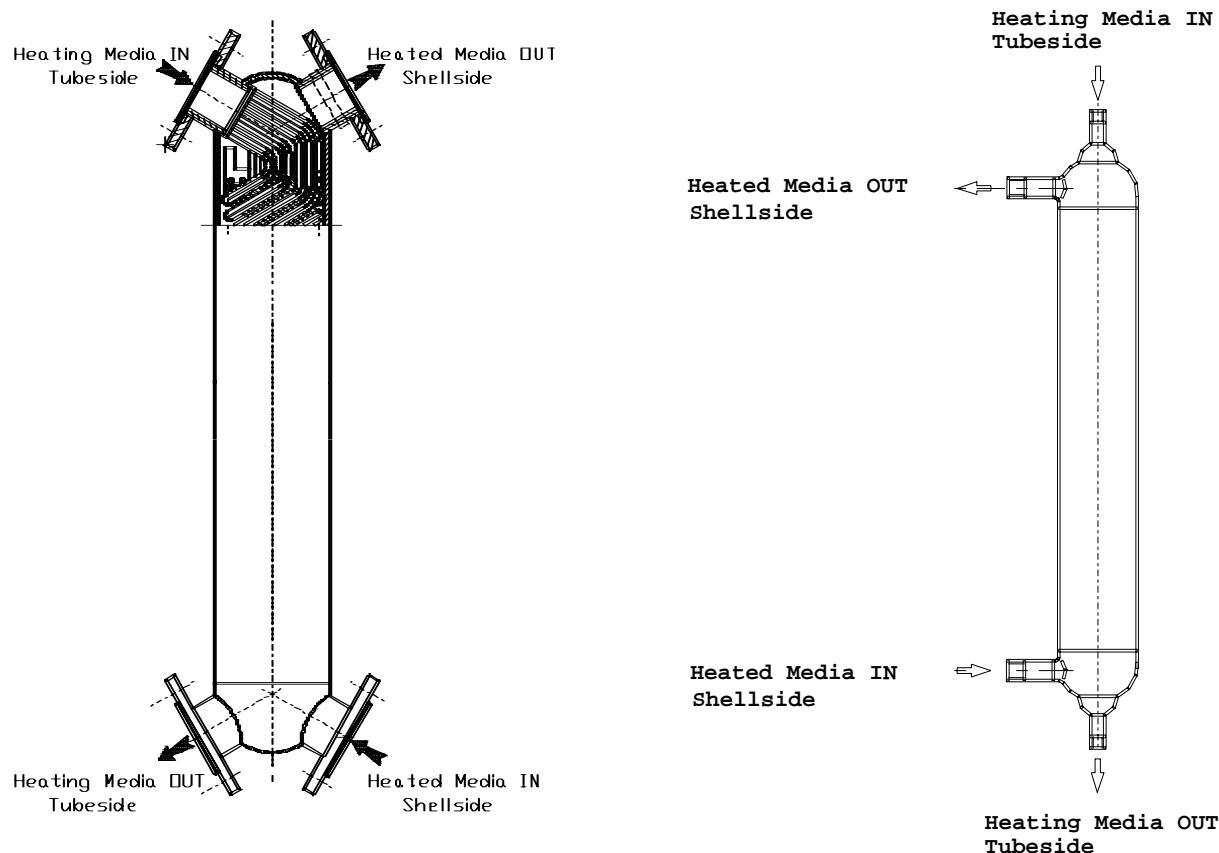

Each heat exchanger has a total of four (4) symmetrically located connections, two on each hemispherical head. One pair of opposing connections is connected to the tube side while the other pair is connected to the shell side.

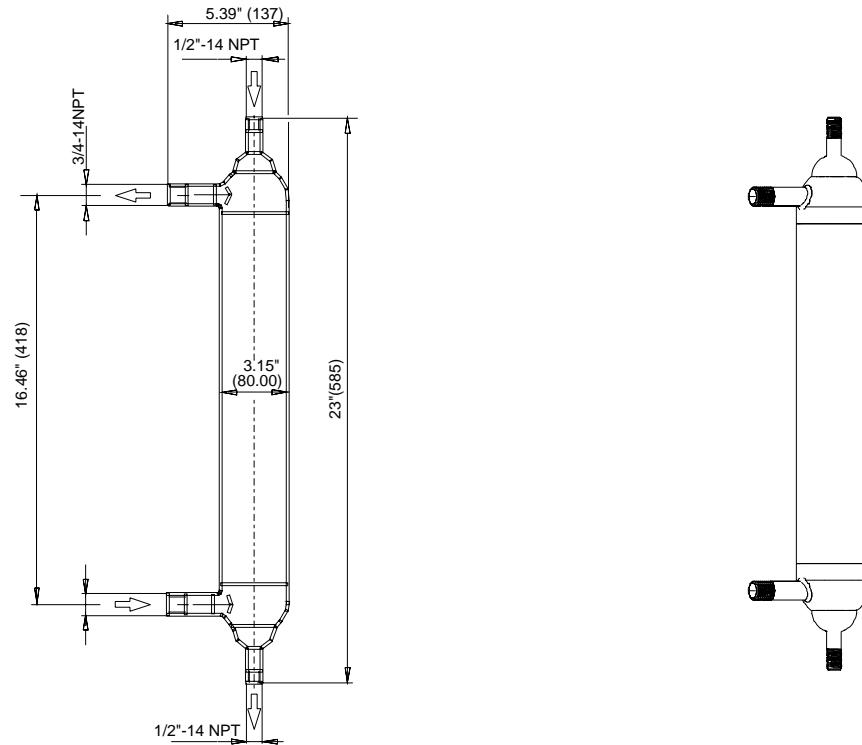

SEC Heat Exchangers Operating Principle

A heat exchanger is a device in which heat is transferred from one flowing fluid to another. Shell and Tube heat exchangers are the most common type of heat exchangers for liquid/liquid service although many applications also involve steam and certain gases. SEC heat exchangers are counter flow units, which from a thermodynamic point of view extract more heat from a given fluid stream than the other common types of heat exchangers.

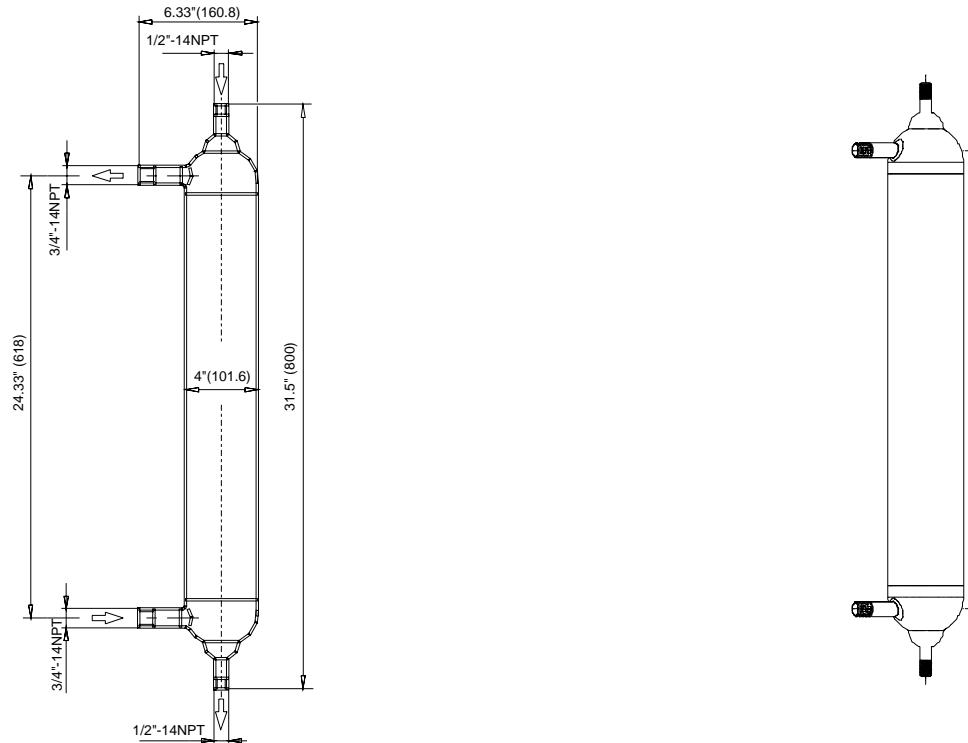

Normally, the heating medium flows through the tubes, although for specific properties or conditions

(e.g. high viscosity, high pressure drops), the heating medium can flow through the shell side. Thermal energy is transferred through the tube walls. The total heat load is dependent on the flow parameters of the fluid.

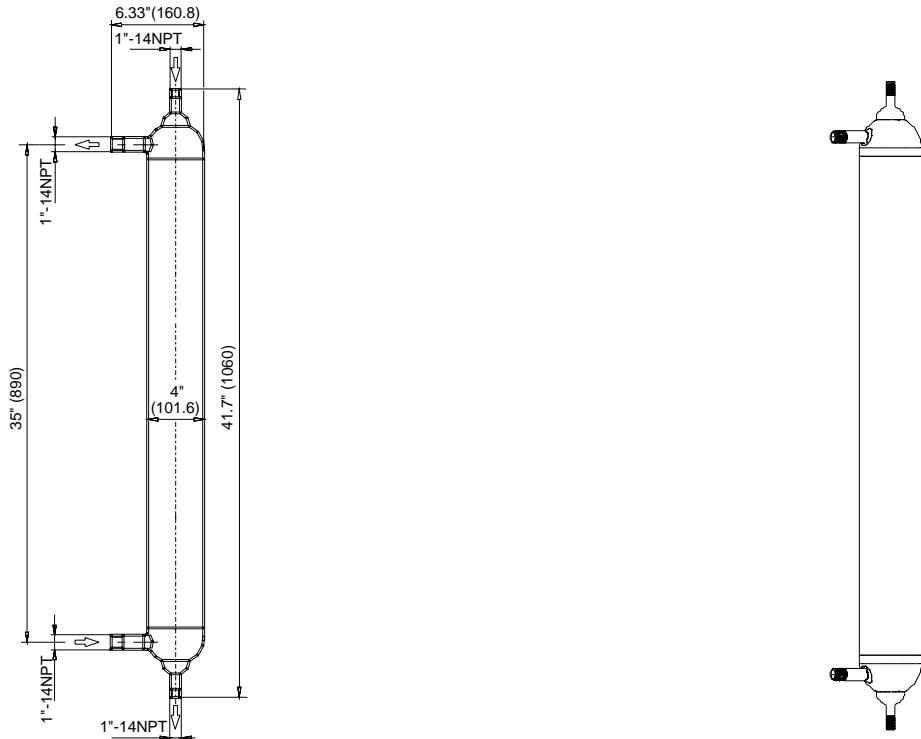

C.3.12.90 HEAT EXCHANGER

Type	C.3.12.90 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	corrugated tubes Ø 8 mm	
size	3.12 ft ² (0.29 m ²)	
Connections		
Tube side	threaded NPT 3/4"	
Shell side	threaded NPT 3/4"	
Material	stainless steel AISI 316L	
Volume		
Shell side	0.25gal (1.0 L)	
Tube side	0.13gal (0.5 L)	
Weight		
threaded connections	11.0lb (5.0 kg)	

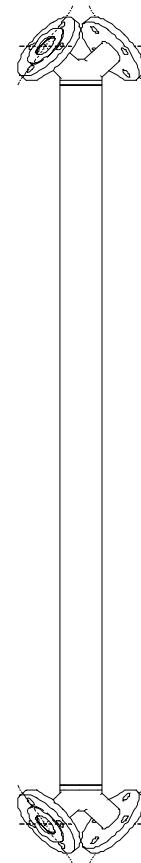

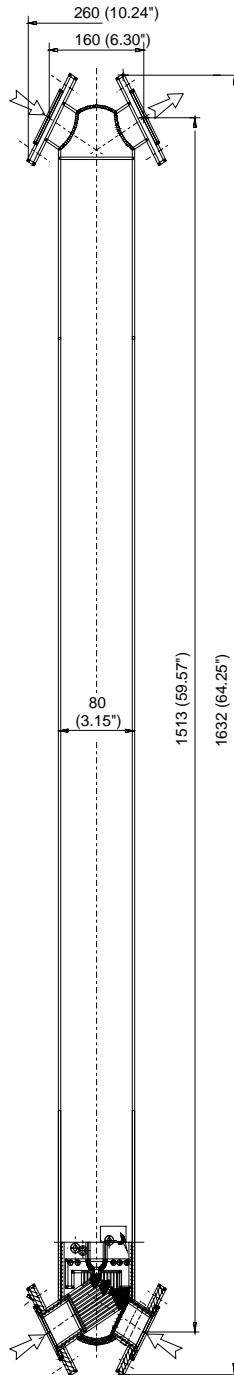

C.8.19.90 HEAT EXCHANGER

Type	C.8.19.90 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	corrugated tubes Ø 8 mm	
size	8.19 ft ² (0.761 m ²)	
Connections		
tube side	threaded NPT 1"	
shell side	threaded NPT 1"	
Material	stainless steel AISI 316L	
Volume		
shell side	0.63gal (2.4 L)	
tube side	0.29gal (1.1 L)	
Weight		
threaded connections	17.6lb (8.0 kg)	

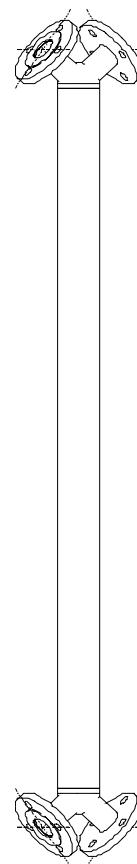

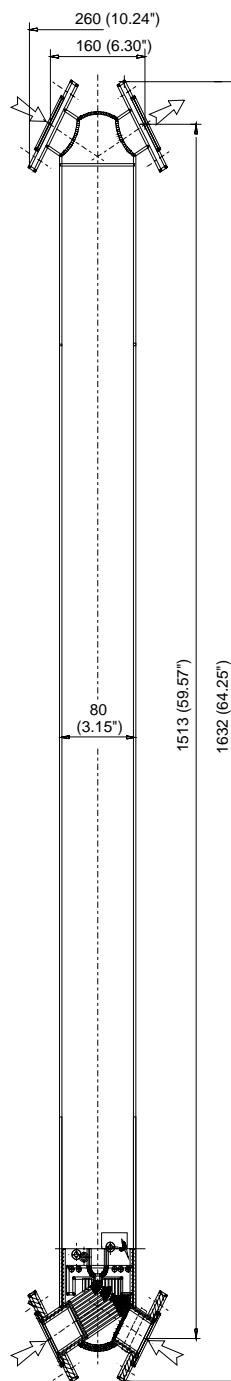

C.14.21.90 HEAT EXCHANGER

Type	C.14.21.90 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface	type corrugated tubes Ø 8 mm size 14.20 ft ² (1.32 m ²)	
Connections	tube side threaded NPT 1" shell side threaded NPT 1"	
Material	stainless steel AISI 316L	
Volume	shell side 0.79gal (3.0 L) tube side 0.50gal (1.9 L)	
Weight	threaded connections 22.0lb (10.0 kg)	

P.12.92.50 HEAT EXCHANGER

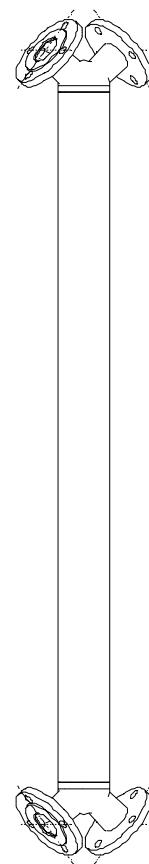

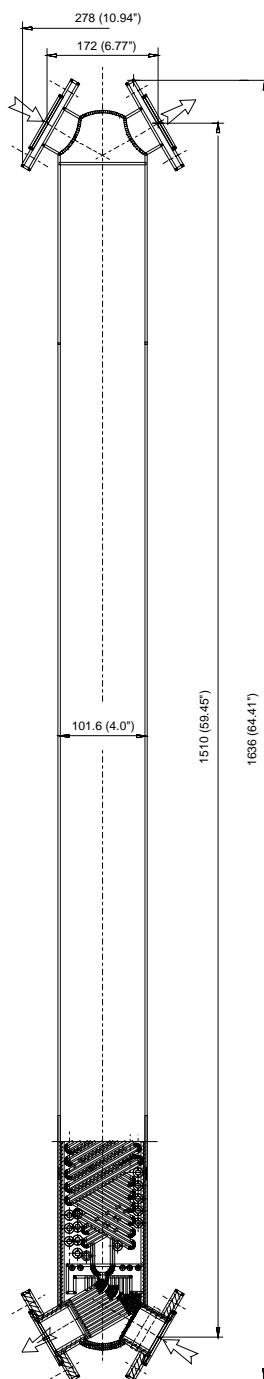

Type	P.12.92.50 counter flow heat exchanger
Working Pressure	250 psi @ 406 F
Working Temperature	min -4 F to max 406 F
Hydraulic Characteristics	logarithmic
Heat Transfer Surface	
type	smooth tubes Ø 8 mm
size	12.91 ft ² (1.2 m ²)
Connections	
tube side	1 ½" FNPT or Die Formed Flanges (compatible to 1 ½" CL 300)
shell side	1 ½" FNPT or Die Formed Flanges (compatible to 1 ½" CL 300)
Material	stainless steel AISI 316L
Volume	
shell side	1.72gal (6.5 L)
tube side	0.95gal (3.6 L)
Weight	
threaded connections	43.0lb (19.5 kg)
flanged connections	51.8lb (23.5 kg)

C.12.92.50 HEAT EXCHANGER

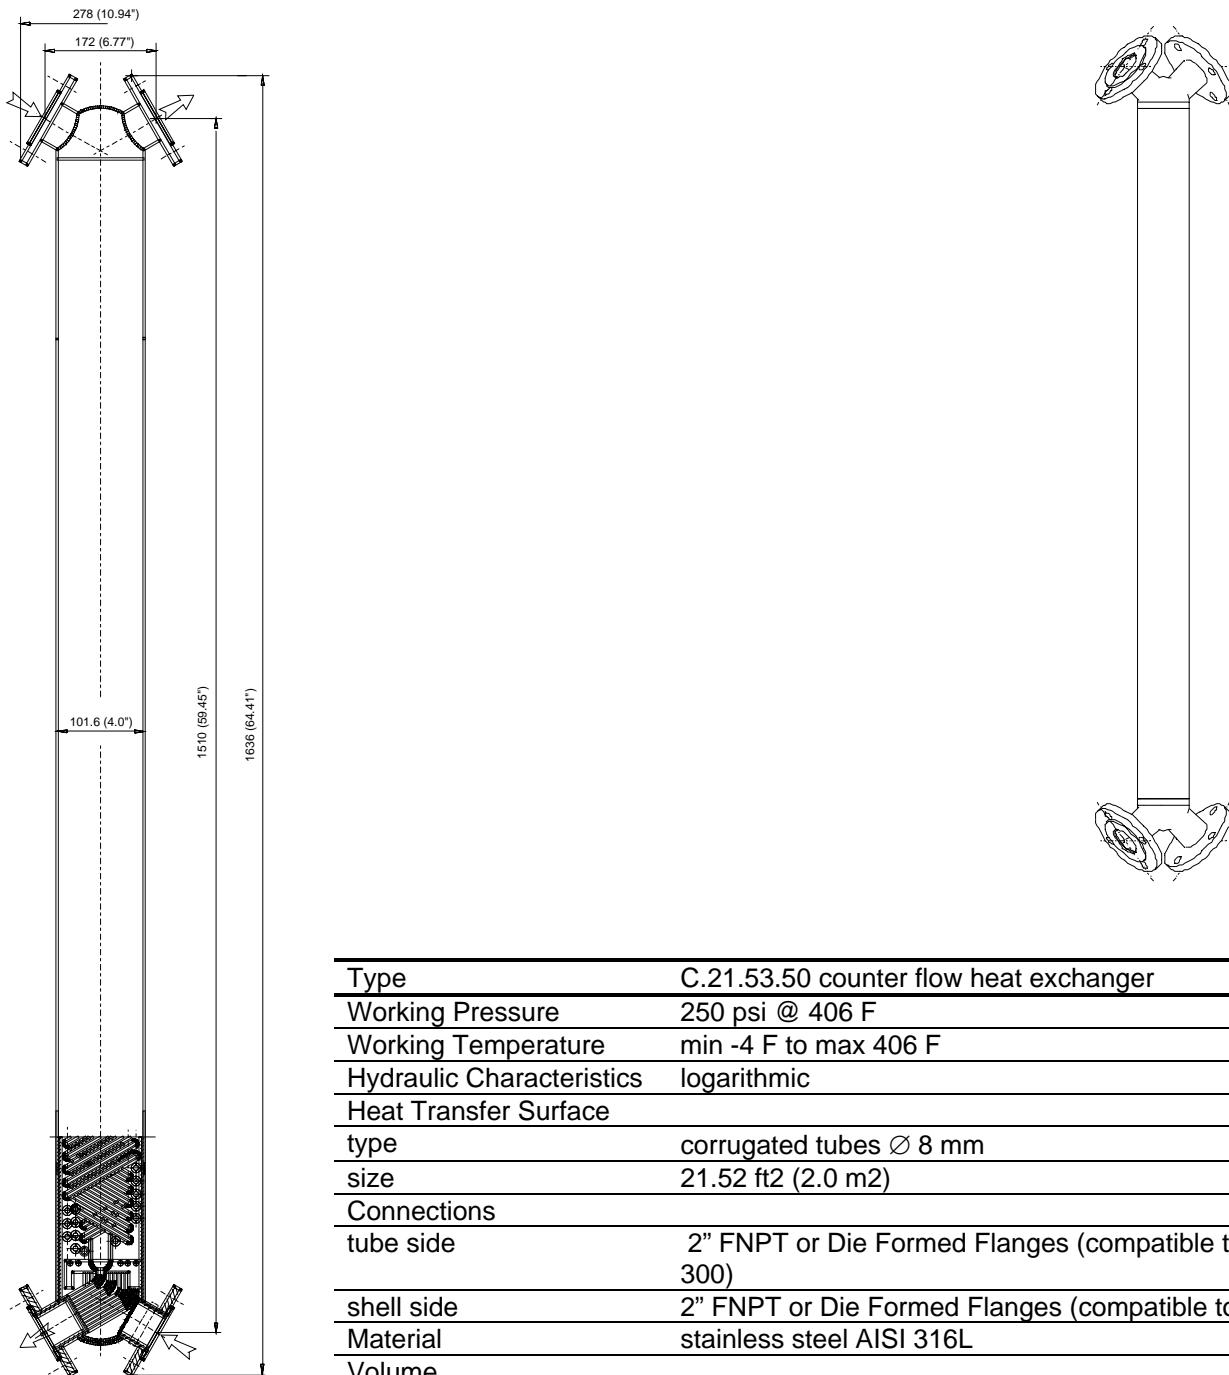

Type	C.12.92.50 counter flow heat exchanger		
Working Pressure	250 psi @ 406 F	min -4 F to max 406 F	
Working Temperature			
Hydraulic Characteristics	logarithmic		
Heat Transfer Surface	type: corrugated tubes Ø 8 mm size: 12.91 ft ² (1.2 m ²)		
Connections	tube side: 1 ½" FNPT or Die Formed Flanges (compatible to 1 ½" CL 300) shell side: 1 ½" FNPT or Die Formed Flanges (compatible to 1 ½" CL 300)		
Material	stainless steel AISI 316L		
Volume	shell side: 1.72gal (6.5 L) tube side: 0.95gal (3.6 L)		
Weight	threaded connections: 43.0lb (19.5 kg) flanged connections: 51.8lb (23.5 kg)		

P.21.53.50 HEAT EXCHANGER

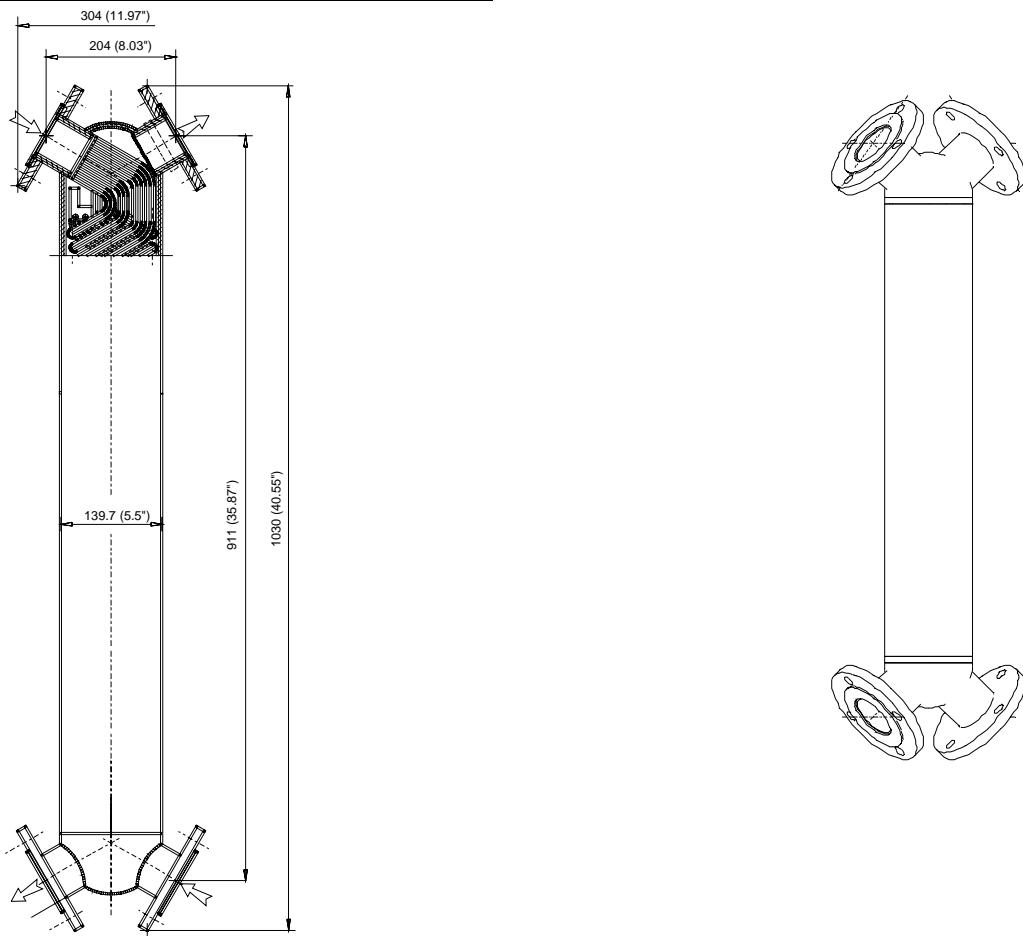

Type	P.21.53.50 counter flow heat exchanger		
Working Pressure	250 psi @ 406 F	min -4 F to max 406 F	
Working Temperature			
Hydraulic Characteristics	logarithmic		
Heat Transfer Surface	type smooth tubes Ø 8 mm size 21.52 ft ² (2.0 m ²)		
Connections	tube side 2" FNPT or Die Formed Flanges (compatible to 2" CL 300) shell side 2" FNPT or Die Formed Flanges (compatible to 2" CL 300)		
Material	stainless steel AISI 316L		
Volume	shell side 1.48gal (5.6 L) tube side 0.79gal (3.0 L)		
Weight	threaded connections 51.1lb (23.2 kg) flanged connections 61.7lb (28.0 kg)		

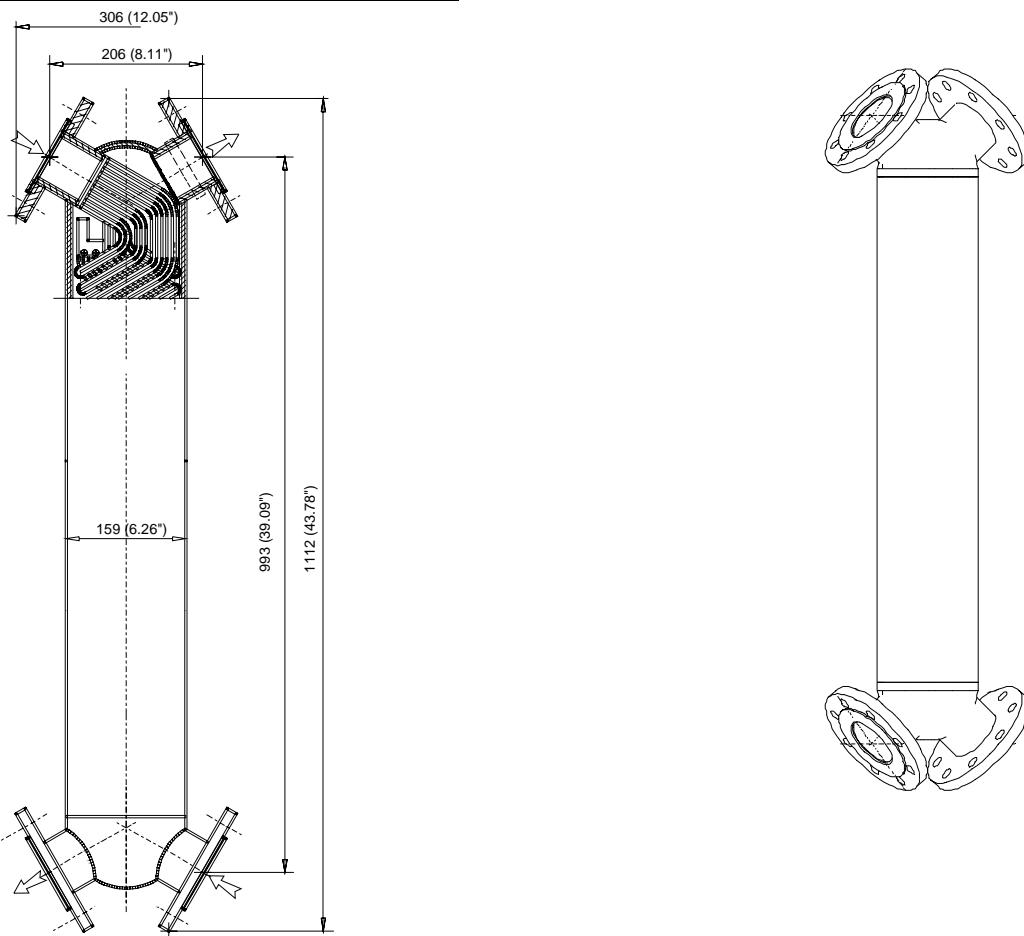

C.21.53.50 HEAT EXCHANGER

Type	C.21.53.50 counter flow heat exchanger
Working Pressure	250 psi @ 406 F
Working Temperature	min -4 F to max 406 F
Hydraulic Characteristics	logarithmic
Heat Transfer Surface	
type	corrugated tubes Ø 8 mm
size	21.52 ft ² (2.0 m ²)
Connections	
tube side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)
shell side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)
Material	stainless steel AISI 316L
Volume	
shell side	1.48gal (5.6 L)
tube side	0.79gal (3.0 L)
Weight	
threaded connections	51.1lb (23.2 kg)
flanged connections	61.7lb (28.0 kg)

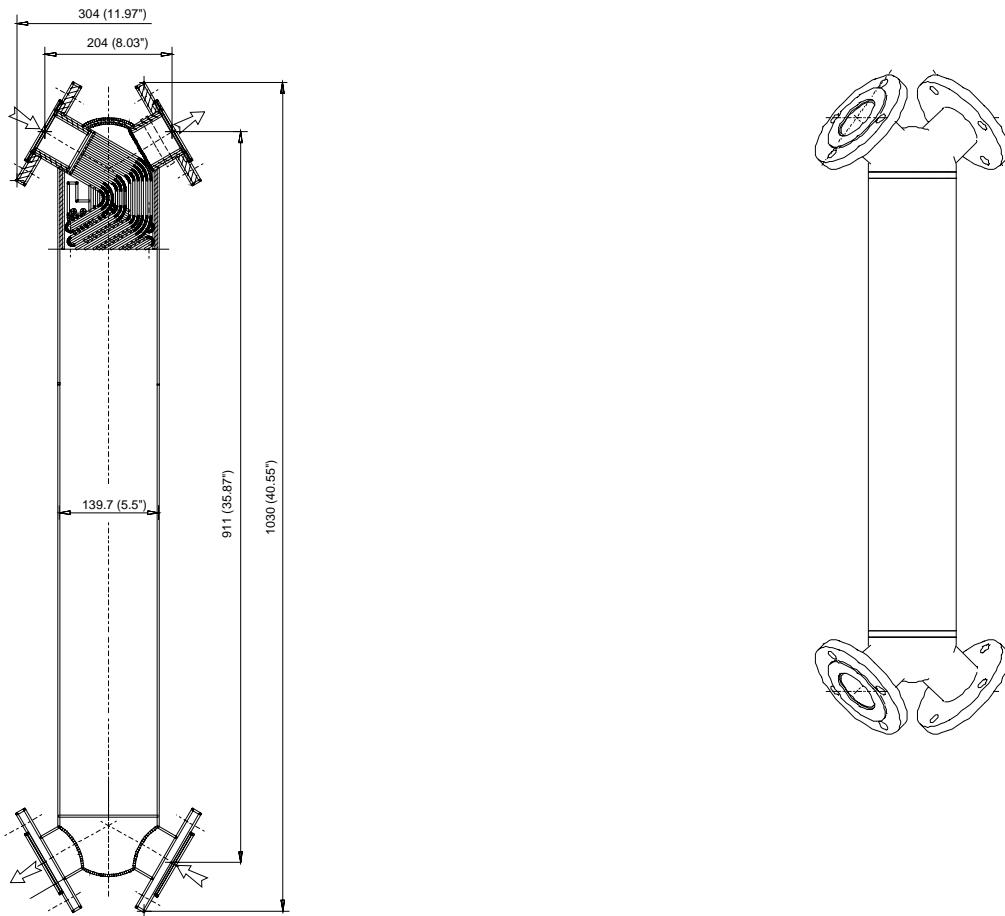

CS.24.76.50 HEAT EXCHANGER

Type	CS.24.76.50 counter flow heat exchanger
Working Pressure	250 psi @ 406 F
Working Temperature	min -4 F to max 406 F
Hydraulic Characteristics	logarithmic
Heat Transfer Surface	
type	corrugated tubes Ø 8 mm
size	24.75 ft ² (2.3 m ²)
Connections	
tube side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)
shell side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)
Material	stainless steel AISI 316L
Volume	
shell side	1.64gal (6.2 L)
tube side	0.86gal (3.3 L)
Weight	
threaded connections	54.0lb (24.5 kg)
flanged connections	63.9lb (29.0 kg)

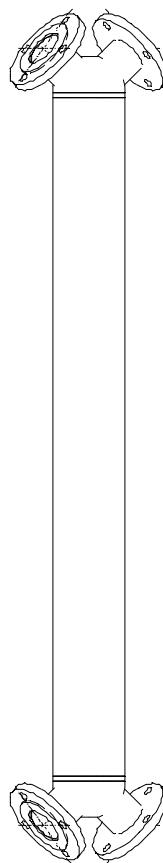

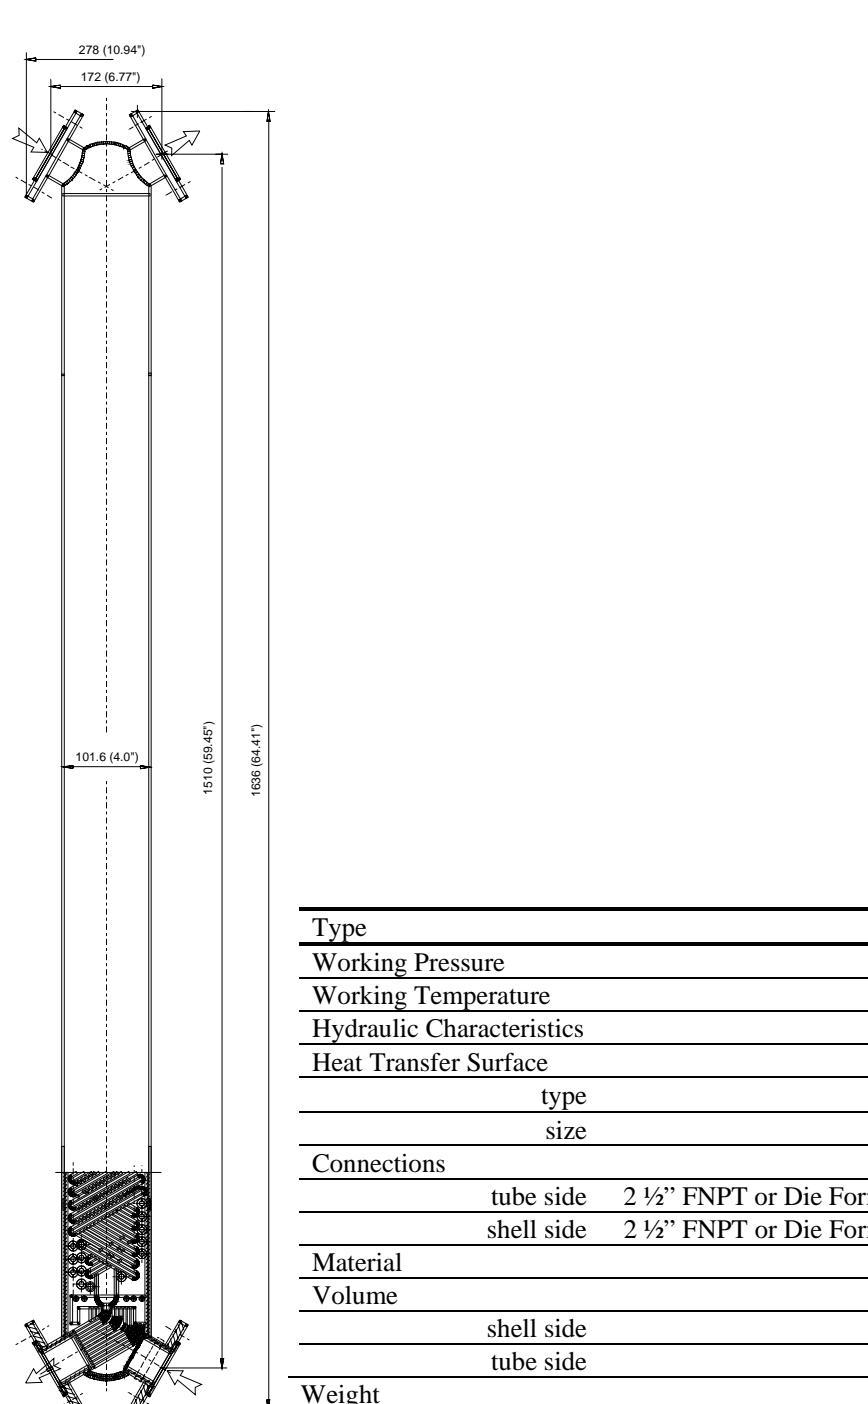

CS.33.80.50 HEAT EXCHANGER

Type	CS.33.80.50 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	corrugated tubes Ø 8 mm	
size	33.79 ft ² (3.14 m ²)	
Connections		
tube side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)	
shell side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	2.58gal (9.8 L)	
tube side	1.20gal (4.5 L)	
Weight		
threaded connections	68.3lb (31.0 kg)	
flanged connections	77.2 lb (35.0 kg)	

C.24.76.50 HEAT EXCHANGER

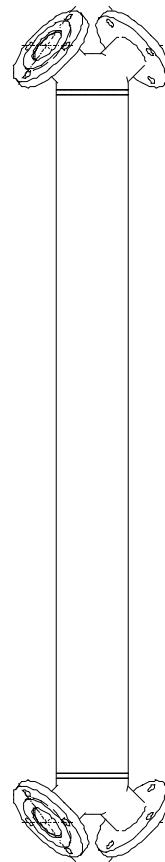

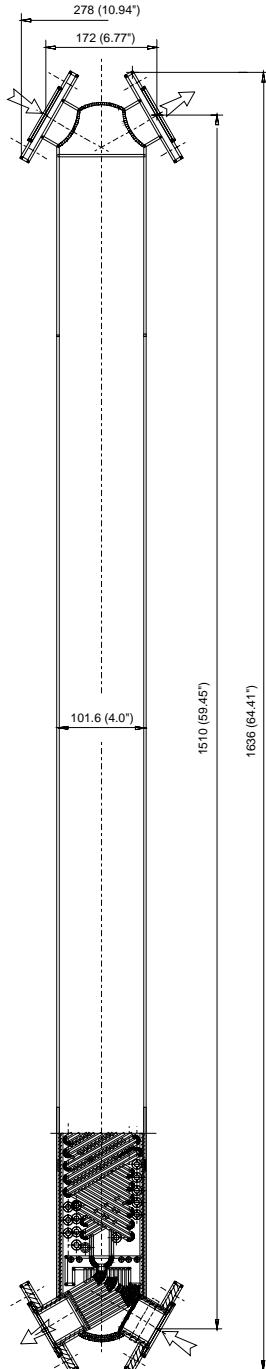

Type	C.24.76.50 counter flow heat exchanger		
Working Pressure	250 psi @ 406 F		
Working Temperature			
Hydraulic Characteristics	min -4 F to max 406 F		
Heat Transfer Surface	logarithmic		
type	corrugated tubes Ø 8 mm		
size	24.75 ft ² (2.3 m ²)		
Connections			
tube side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)		
shell side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)		
Material	stainless steel AISI 316L		
Volume			
shell side	1.32gal (5L)		
tube side	1.06gal (4.8 L)		
Weight			
threaded connections	54.0lb (24.5 kg)		
flanged connections	63.9lb (29.0 kg)		

P.43.06.50 HEAT EXCHANGER

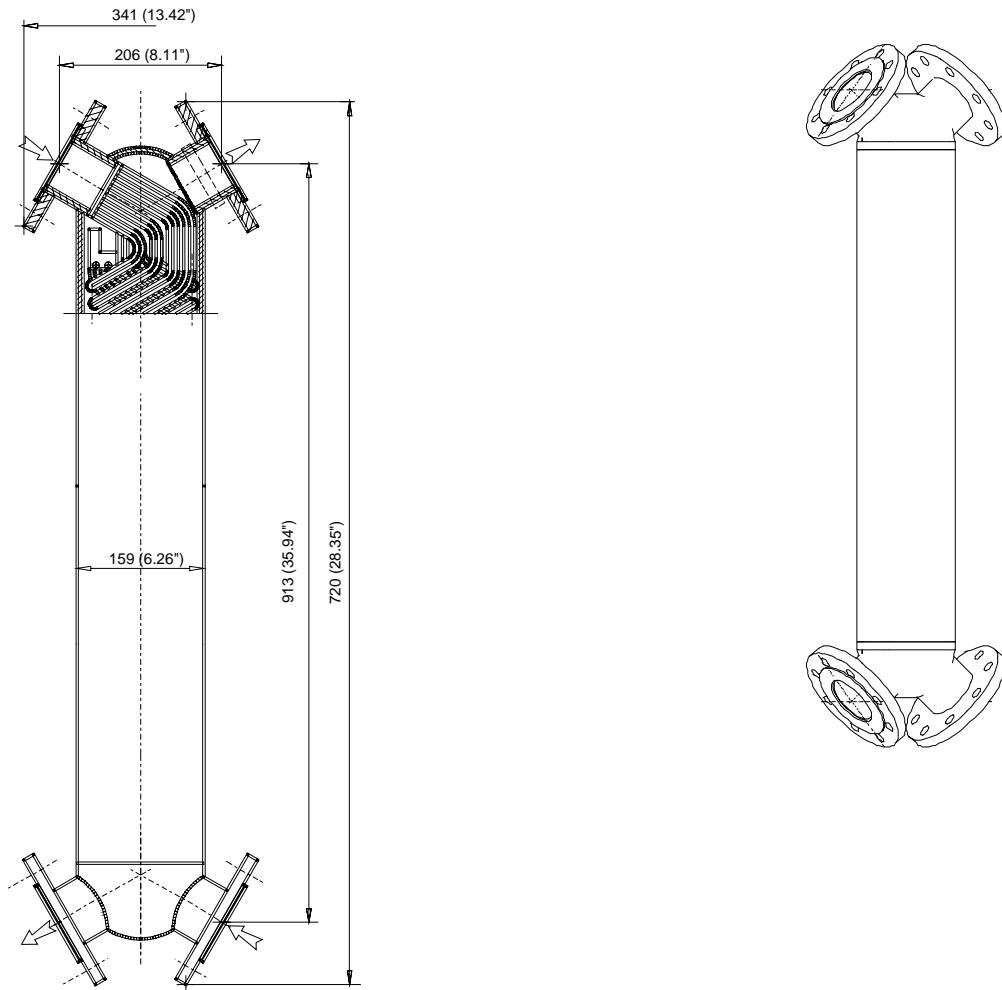

Type	P.43.06.50 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	smooth tubes Ø 8 mm	
size	43.04 ft ² (4.0 m ²)	
Connections		
tube side	2 ½" FNPT or Die Formed Flanges (compatible to 2 ½" CL 300)	
shell side	2 ½" FNPT or Die Formed Flanges (compatible to 2 ½" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	3.01gal (11.4 L)	
tube side	1.93gal (7.3 L)	
Weight		
threaded connections	85.3lb (38.7 kg)	
flanged connections	95.9lb (43.5 kg)	

C.43.06.50 HEAT EXCHANGER

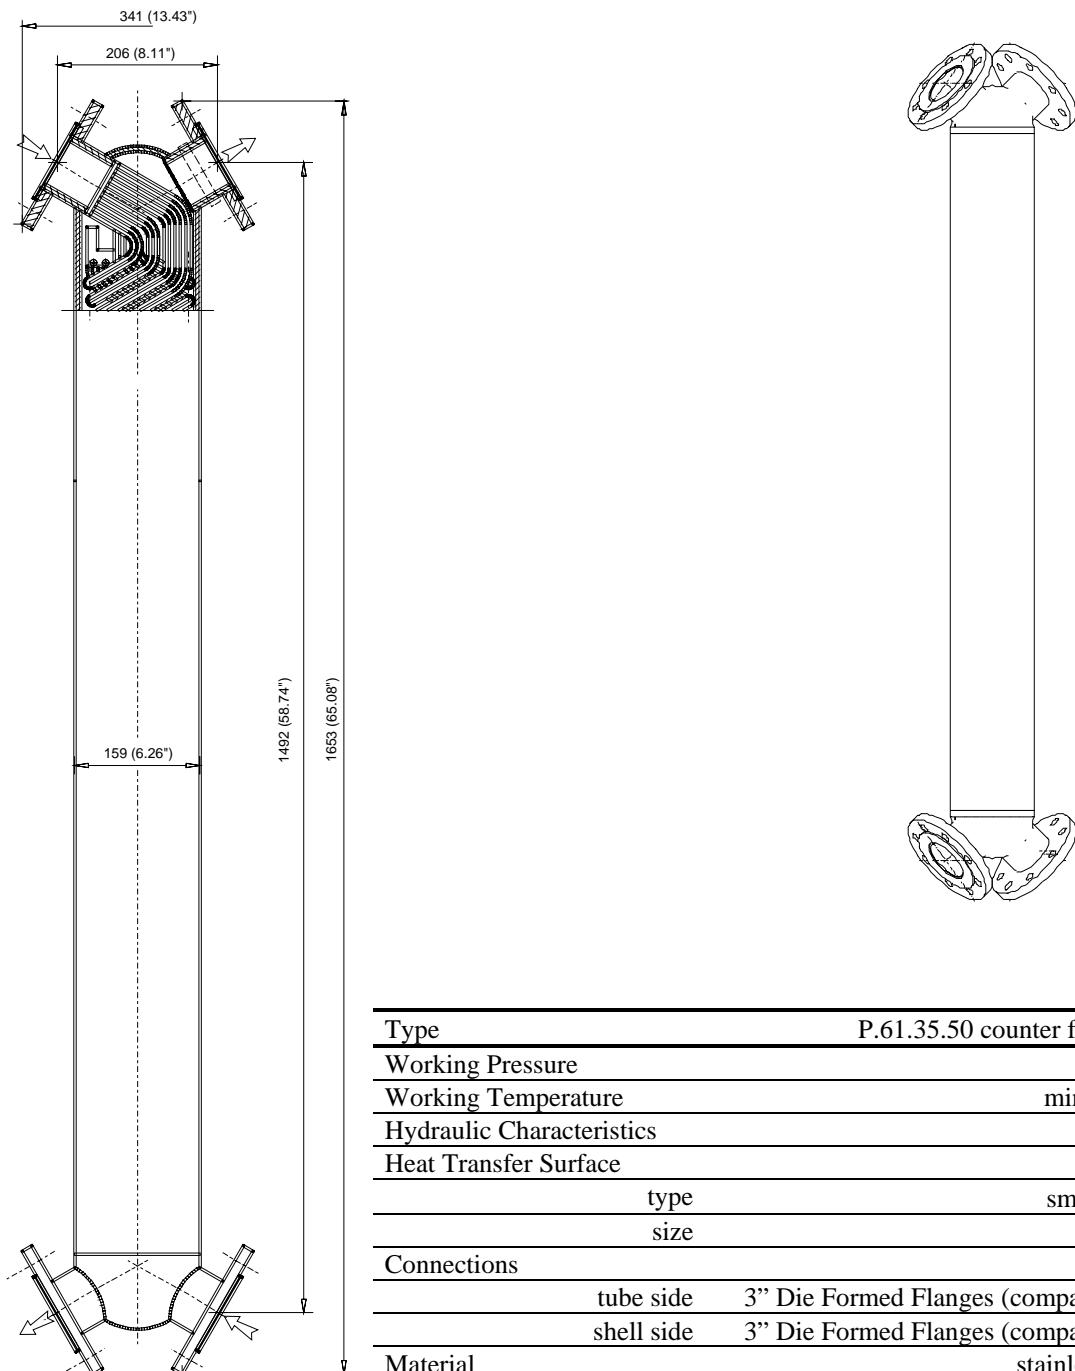

Type	C.43.06.50 counter flow heat exchanger		
Working Pressure	250 psi @ 406 F	min -4 F to max 406 F	
Working Temperature			
Hydraulic Characteristics	logarithmic		
Heat Transfer Surface			
type	corrugated tubes Ø 8 mm		
size	43.04 ft ² (4.0 m ²)		
Connections			
tube side	2 ½" FNPT or Die Formed Flanges (compatible to 2 ½" CL 300)		
shell side	2 ½" FNPT or Die Formed Flanges (compatible to 2 ½" CL 300)		
Material	stainless steel AISI 316L		
Volume			
shell side	3.01gal (11.4 L)		
tube side	1.93gal (7.3 L)		
Weight			
threaded connections	85.3lb (38.7 kg)		
flanged connections	95.9lb (43.5 kg)		

C.33.80.50 HEAT EXCHANGER

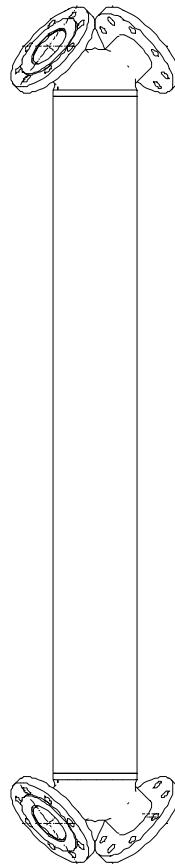

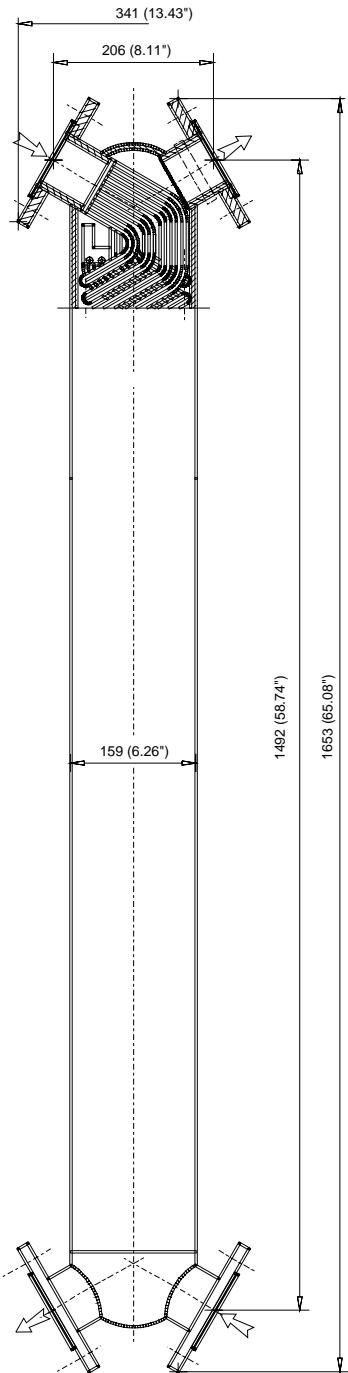

Type	C.33.80.50 counter flow heat exchanger	
Working Pressure		250 psi @ 406 F
Working Temperature		min -4 F to max 406 F
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
	type	corrugated tubes Ø 8 mm
	size	33.79 ft ² (3.14 m ²)
Connections		
tube side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)	
shell side	2" FNPT or Die Formed Flanges (compatible to 2" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	2.58gal (9.8 L)	
tube side	1.20gal (4.5 L)	
Weight		
threaded connections	68.3lb (31.0 kg)	
flanged connections	77.2 lb (35.0 kg)	

P.61.35.50 HEAT EXCHANGER

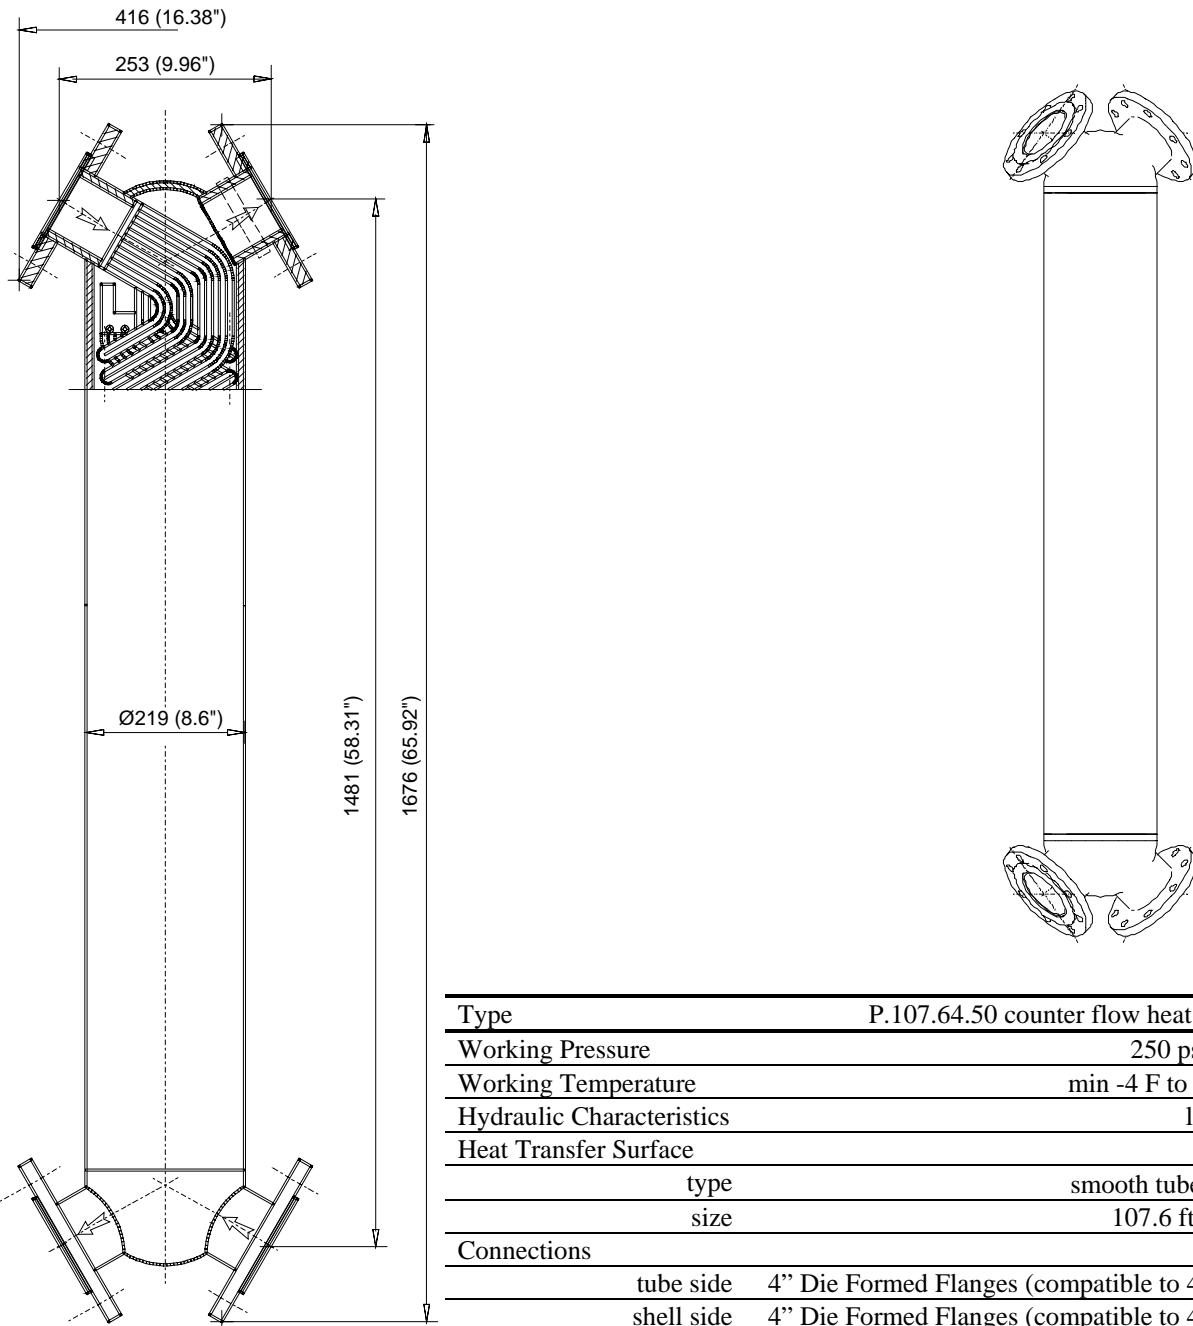

Type	P.61.35.50 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	smooth tubes Ø 8 mm	
size	61.33ft ² (5.7 m ²)	
Connections		
tube side	3" Die Formed Flanges (compatible to 3" CL 300)	
shell side	3" Die Formed Flanges (compatible to 3" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	3.96gal (15.0L)	
tube side	2.56gal (9.7 L)	
Weight		
threaded connections	101.4lb (46.0 kg)	
flanged connections	121.3lb (55 kg)	

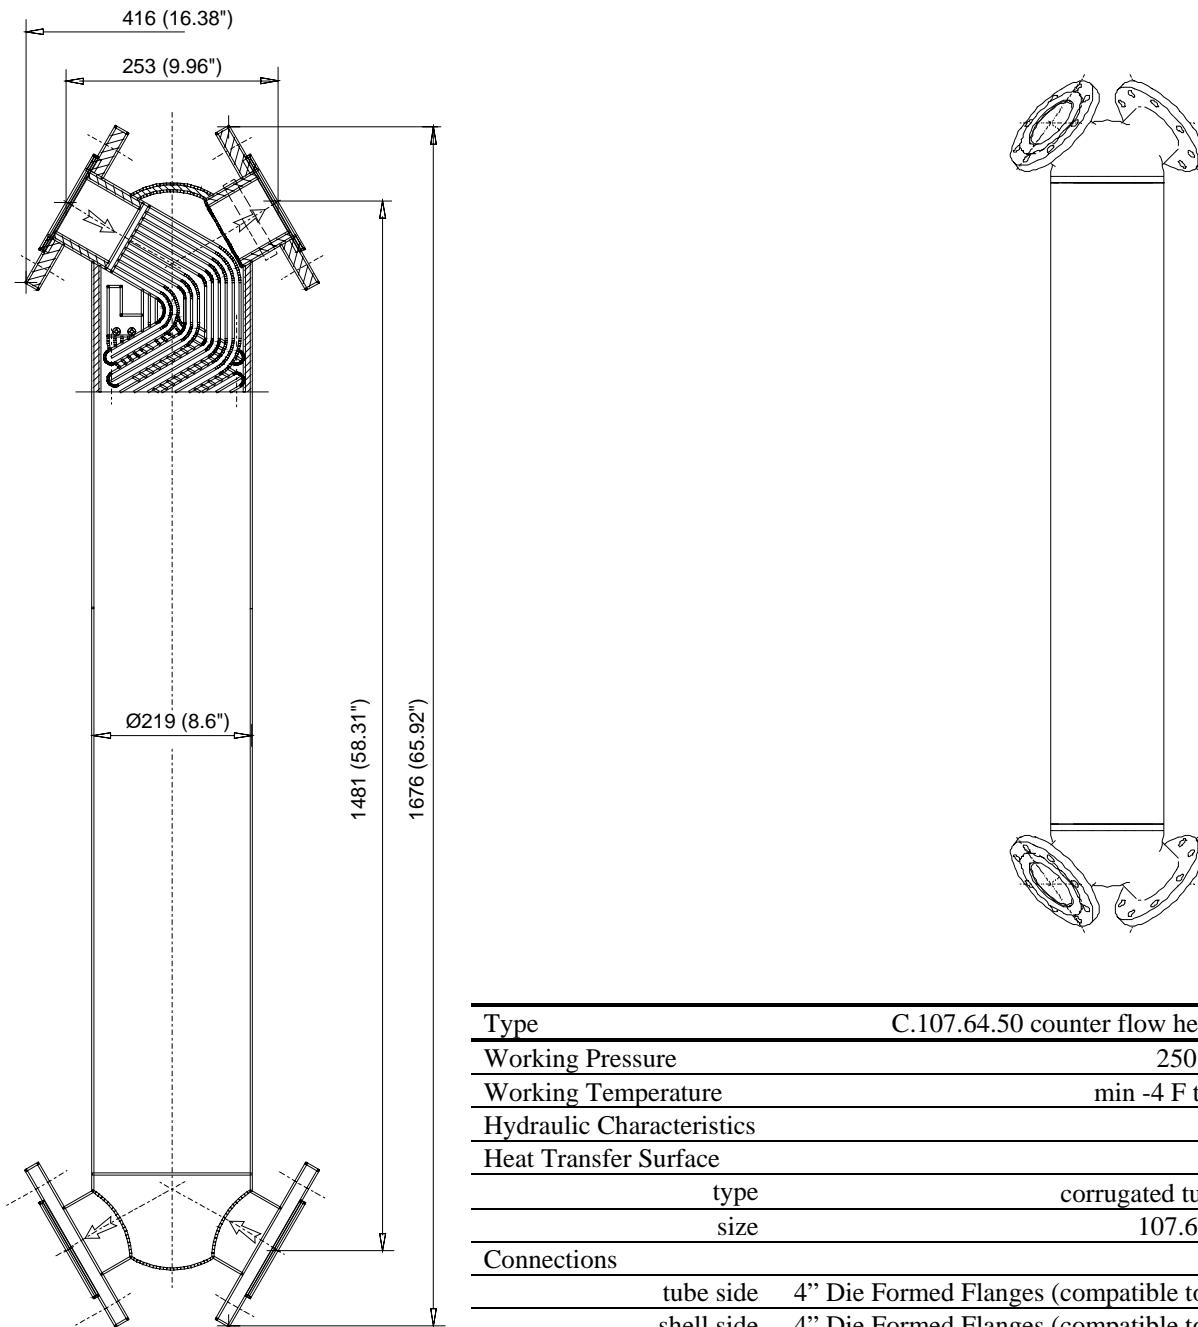

C.61.35.50 HEAT EXCHANGER

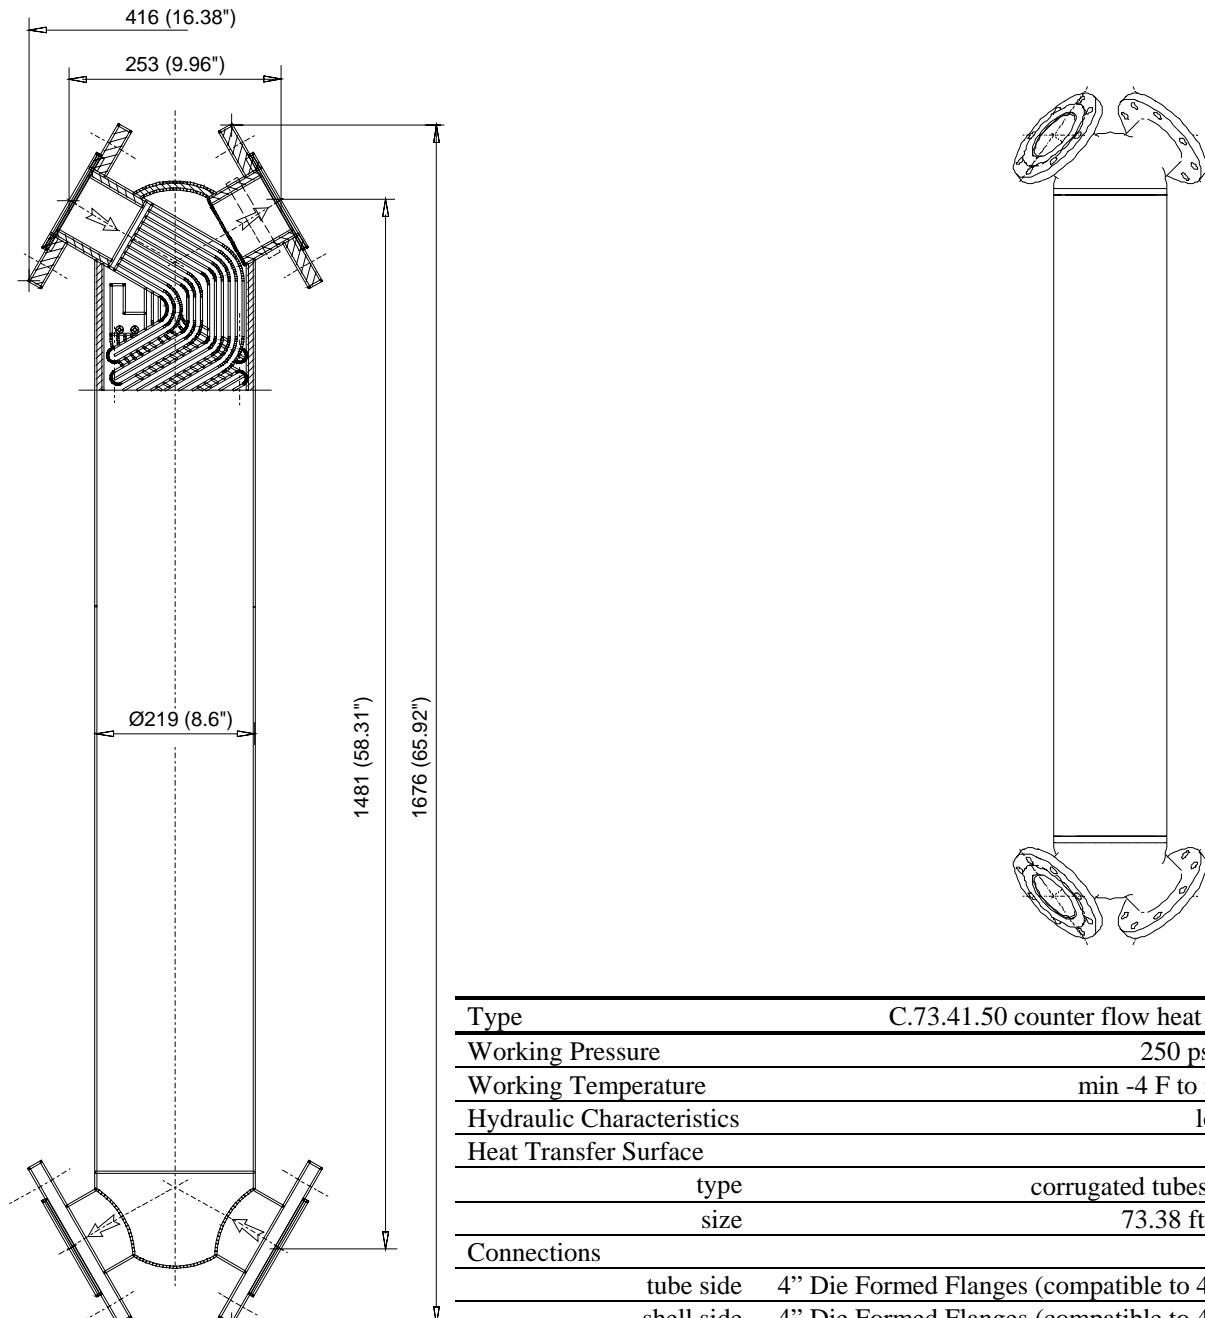

Type	C.61.35.50 counter flow heat exchanger		
Working Pressure	250 psi @ 406 F	min -4 F to max 406 F	
Working Temperature			
Hydraulic Characteristics	logarithmic		
Heat Transfer Surface			
type	corrugated tubes Ø 8 mm		
size	61.33ft ² (5.7 m ²)		
Connections

shell side	4" Die Formed Flanges (compatible to 4" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	7.66gal (29.0 L)	
tube side	4.23gal (16.0 L)	
Weight		
flanged connections	209.4lb (95.0 kg)	

C.73.41.50 HEAT EXCHANGER

Type	C.73.41.50 counter flow heat exchanger
Working Pressure	250 psi @ 406 F
Working Temperature	min -4 F to max 406 F
Hydraulic Characteristics	logarithmic
Heat Transfer Surface	
type	corrugated tubes Ø 12 mm
size	73.38 ft ² (6.82 m ²)
Connections	
tube side	4" Die Formed Flanges (compatible to 4" CL 300)
shell side	4" Die Formed Flanges (compatible to 4" CL 300)
Material	stainless steel AISI 316L
Volume	
shell side	9.24 gal (35.0 L)
tube side	2.64 gal (10.0 L)
Weight	
flanged connections	198.4lb (90.0 kg)

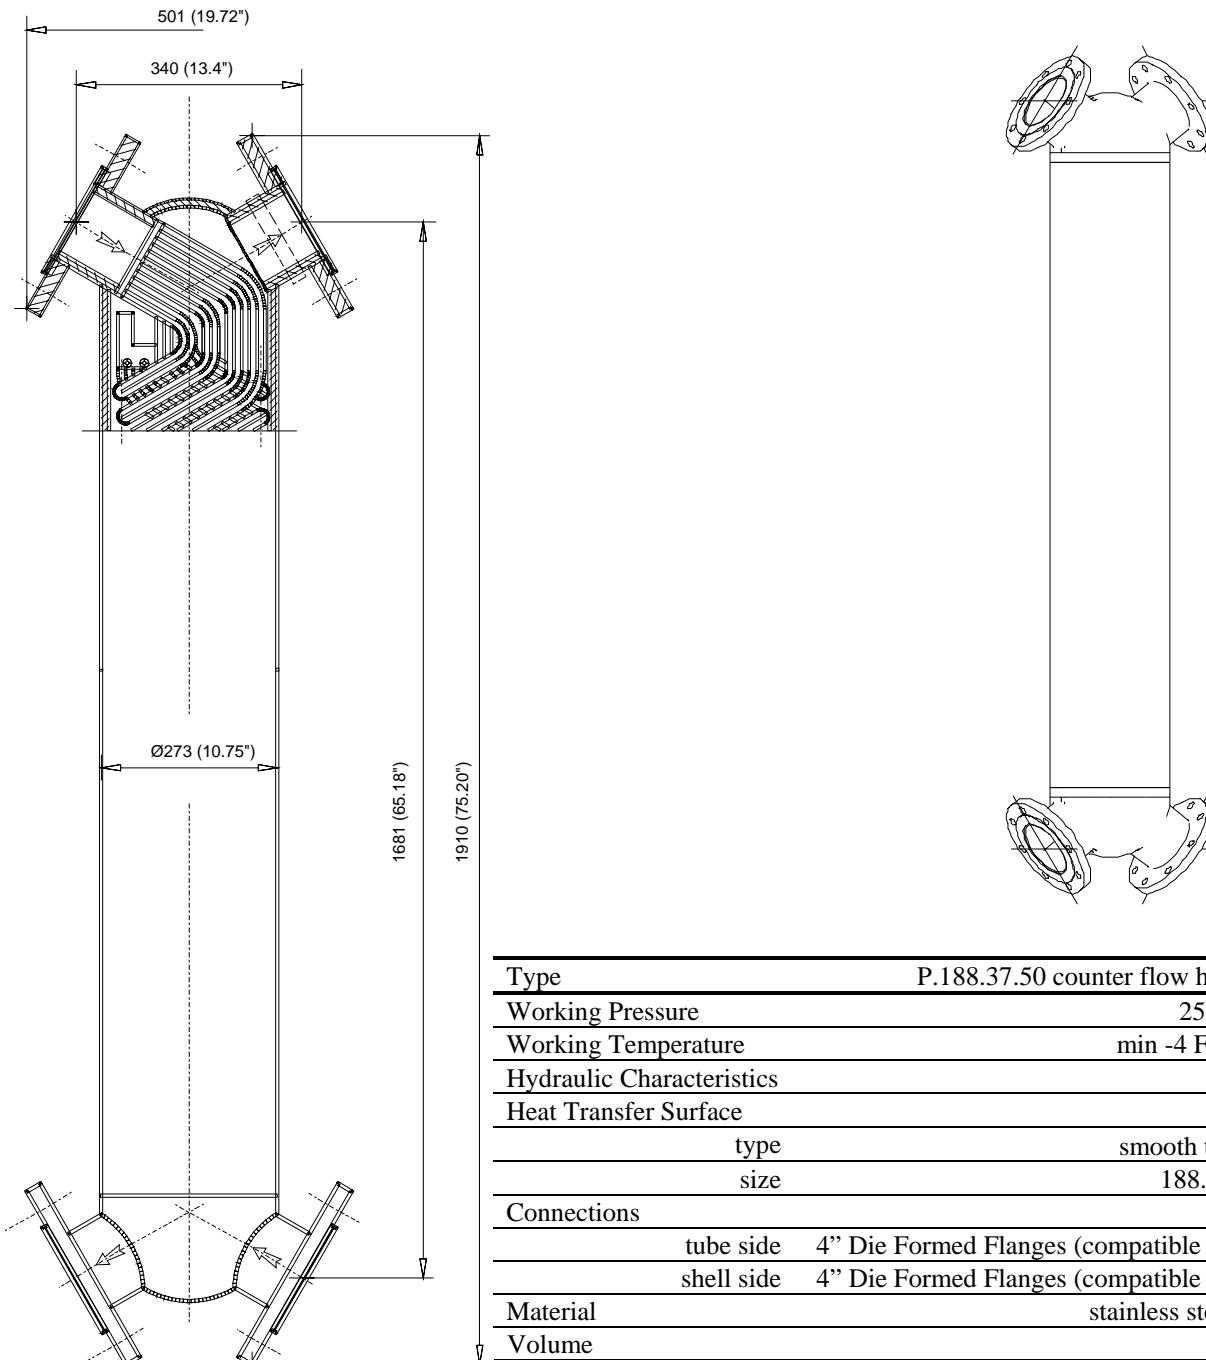

C.59.20.50 HEAT EXCHANGER

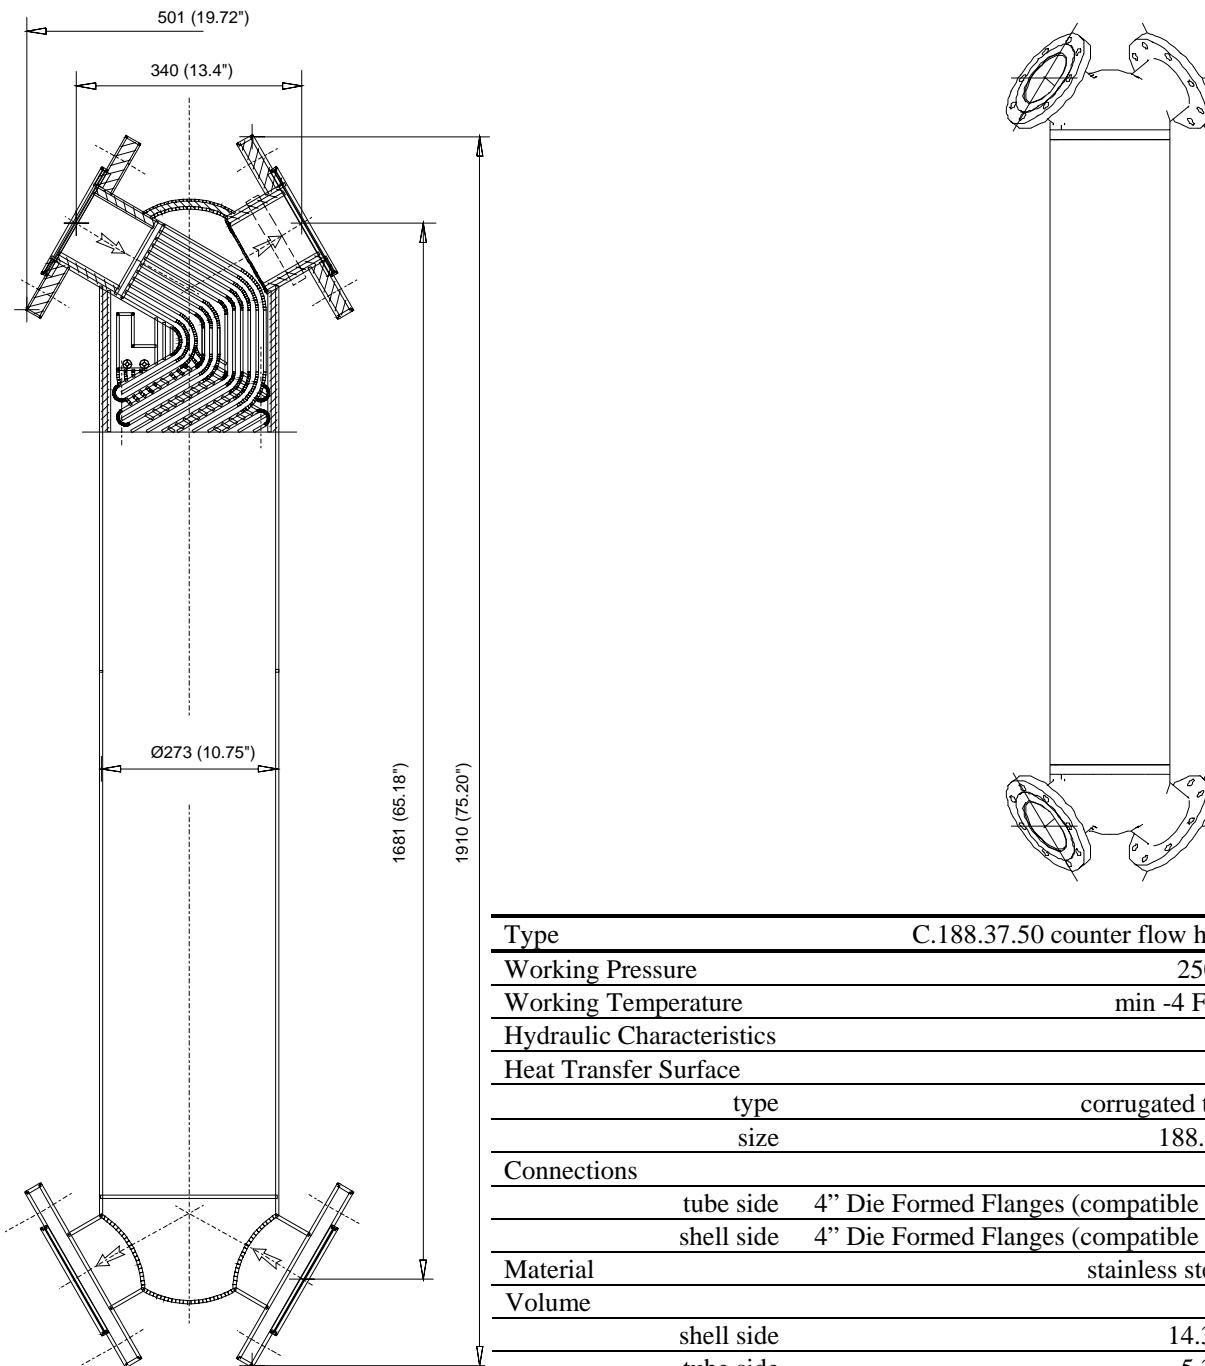

Type	C.59.20.50 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	corrugated tubes Ø 8 mm	
size	59.18 ft ² (5.5 m ²)	
Connections		
tube side	4" Die Formed Flanges (compatible to 4" CL 300)	
shell side	4" Die Formed Flanges (compatible to 4" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	6.60 gal (25 L)	
tube side	2.16 gal (8.2 L)	
Weight		
flanged connections	127.42 lb (57.8 kg)	

C.44.13.50 HEAT EXCHANGER

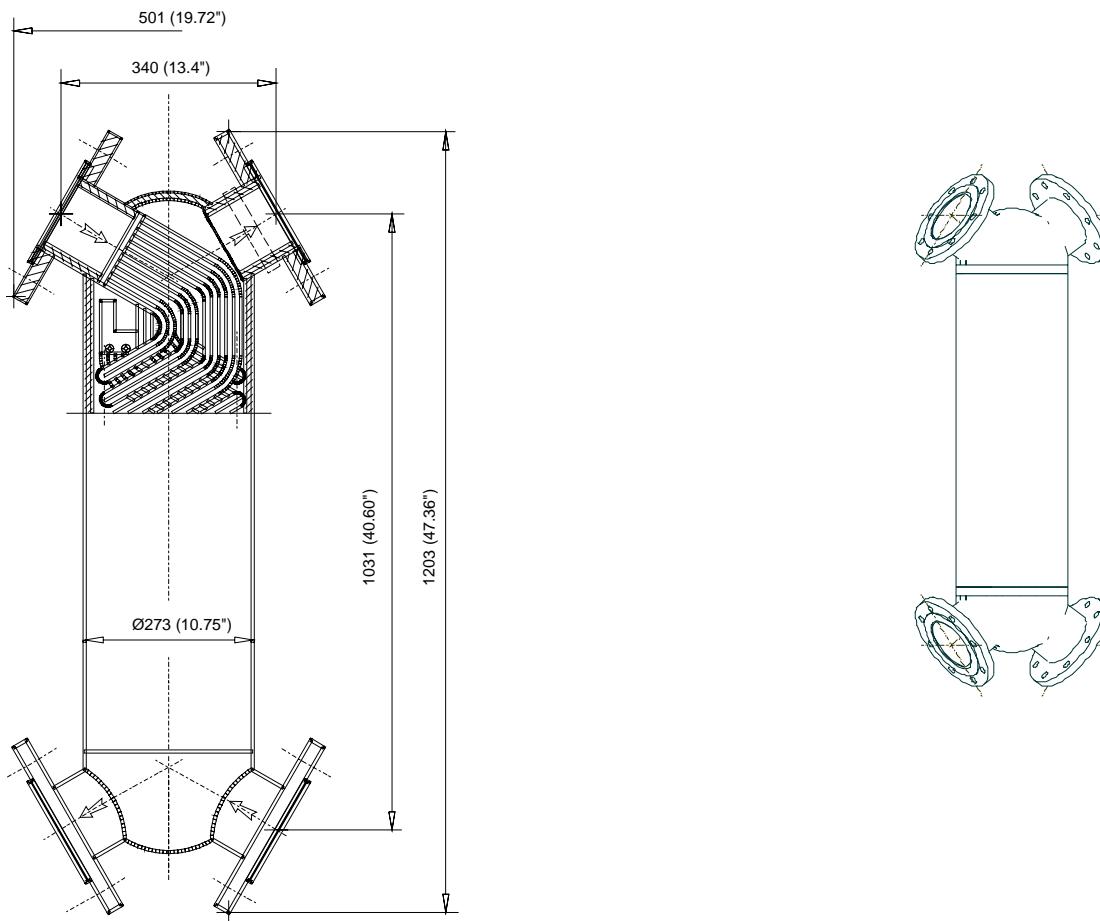

Type	C.44.13.50 counter flow heat exchanger	
Working Pressure	250 psi @ 406 F	
Working Temperature	min -4 F to max 406 F	
Hydraulic Characteristics	logarithmic	
Heat Transfer Surface		
type	corrugated tubes Ø 8 mm	
size	44.12 ft ² (4.1 m ²)	
Connections		
tube side	4" Die Formed Flanges (compatible to 4" CL 300)	
shell side	4" Die Formed Flanges (compatible to 4" CL 300)	
Material	stainless steel AISI 316L	
Volume

tube side	4" Die Formed Flanges (compatible to 4" CL 300)	
shell side	4" Die Formed Flanges (compatible to 4" CL 300)	
Material	stainless steel AISI 316L	
Volume		
shell side	7.65 gal (29 L)	
tube side	2.11 gal (L)	
Weight		
flanged connections	146.38 lb (68.1kg)	

PL/PLT type Heat Exchangers

We are pleased to introduce our new revolutionary line of **PL (Stainless Steel)** and **PLT (Titanium)** heat exchangers.

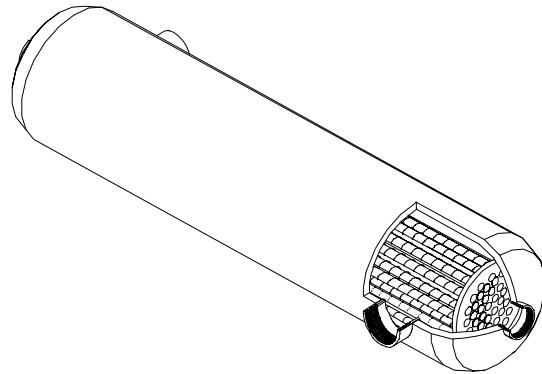

Thanks to the patented helically corrugated tube design, the **PL/PLT** heat exchangers can deliver excellent thermal performance even with fouled heating media.

Typical Residential and Commercial Applications

- In-floor heating
- swimming pools, spas, hot tubs
- driveway snowmelts

Typical Industrial Applications

- oil coolers
- transmission and engine coolers
- boiler sample coolers
- waste water heat recovery

The Benefits To You

- Designed to perform at high fluid velocities with low pressure drops
- Made entirely of high quality, specially treated AISI 316L stainless steel (PL) or titanium (PLT) to ensure superior corrosion resistance and longer product life
- Induced self-cleansing feature - one less thing to worry about

Availability: All models are kept in stock for immediate delivery.

ENGINEERING DATA PL/PLT HEAT EXCHANGERS

Table 3 Heat Exchangers Performance

Heat Exchanger Type	Nominal Capacity		Hot Water			Cold Water			Heat Transfer Surface	
			Flow	Pressure drop	Flow	Pressure drop				
kW	Btu/hr	l/min	kPa	psig	l/min	kPa	psig	m ²	ft ²	
PL/PLT 45	13	45,000	23	6.2	0.90	150	7.4	1.07	0.150	1.62
PL/PLT 70	20	70,000	25	7.5	1.09	170	9.2	1.33	0.246	2.64
PL/PLT 130	38	130,000	27	8.1	1.17	200	11.4	1.65	0.339	3.64
PL/PLT 180	53	180,000	30	2.7	0.40	210	7.5	1.1	0.440	4.70
PL/PLT 250	73	250,000	35	4.2	0.60	270	12.0	1.7	0.630	6.80
PL/PLT 300	88	300,000	40	6.4	0.90	300	17.0	2.5	0.840	9.00
PL/PLT 500	146	500,000	55	9.2	1.30	360	22.0	3.2	1.560	16.80
PL/PLT 1000	293	1,000,000	95	16.2	2.35	705	29.1	4.22	1.970	21.21

Nominal values are based on 60°C temperature between incoming heating and heated water.

**Table 4 Dimensions**

Type	A	B	C	D	E	F	G	
	mm (in)							
PL/PLT-45	302 (11.89)	156 (6.14)	150 (5.91)	80 (3.15)	37.7 (1.48)	1" NPTF	¾" NPT	
PL/PLT-70	402 (15.83)		250 (9.84)			1 ½" NPTF		
PL/PLT-130	502 (19.76)		350 (13.77)					
PL/PLT-180	386 (15.19)		280 (11.02)					
PL/PLT -250	512 (20.15)	143.6 (5.65)	406 (15.98)	101.6 (4)	43.5 (1.71)	1" NPTF	2" NPT	
PL/PLT -300	646 (25.43)		540 (21.26)		41.5 (1.63)			
PL/PLT -500	1106 (43.54)		1000 (39.37)		44.5 (1.75)			
PL/PLT -1000	969 (38.15)		794 (31.26)		58 (2.28)	2" NPTF		

Standard Materials : 316L Stainless Steel / Titanium

Maximum allowable Working Pressure: 250 psig (1.72 MPa)

Maximum Allowable Working Temperature: 406 F (208 C)

Brazed Plate Series

Brazed Plate Series

- exceptional value
- highly efficient
- full range of models
- OEM inquiries welcome

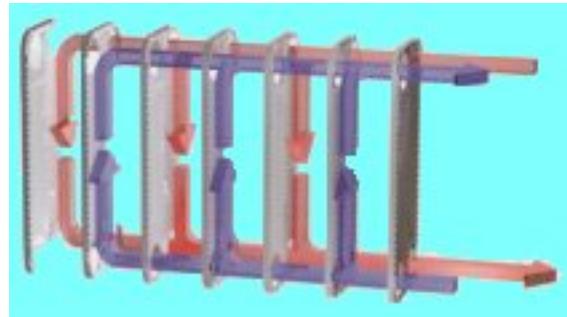

The highly efficient design and excellent value of SEC Brazed Plate Heat Exchangers makes them a wise choice for your heat transfer applications. Produced to the highest standards utilizing the latest production technology our products meet the demanding quality requirements of ASME, CRN, and ISO

9002. Our Brazed Plate Heat Exchangers are pressure rated for 450psi @ 460F.

Brazed Plate heat exchangers have a 1 year warranty.

They are available in threaded or solder connections.

SEC Brazed Plate Heat Exchangers consist of specially formed stainless steel plates, vacuum brazed together to form a highly efficient heat transfer device. The corrugated pattern stamped into each plate produces turbulent flows. This results in high heat transfer coefficients. The plate size, number of plates, and connection sizes are varied to match the customer's heat transfer requirements precisely. Individual units have capacities up to 4,000,000 btu or 50 tons for refrigeration.

Our quality Brazed Plate Heat Exchangers find applications in many fields:

SNOW MELT - AQUACULTURE - RADIANT HEATING – DOMESTIC HOT WATER - OIL COOLERS – INDUSTRIAL PROCESSES - MARINE - HVAC POOL AND SPA HEATING - FUEL OIL PREHEATING - BOILER BLOW DOWN HEAT RECOVERY - REFRIGERATION (evaporators, sub-coolers, condensers) – METAL FINISHING - AUTOMOTIVE PARTS PROCESSING – BEVERAGE PRODUCTION - COGENERATION.

Availability

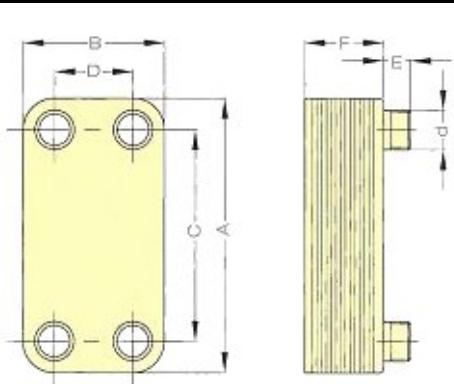

All models are kept in stock for immediate delivery.

Technical Parameters Diagram
(for use with the above chart)

Standard Connection Types:
Solder (sweat) - Threaded (NPT) - Flanged

Material:

Plates and Connections: AISI 316
Brazing: Copper, Nickel

Design Parameters:

Maximum Working Pressure: 435 Psi (232 Psi*)

Maximum Working Temperature: copper brazed 437°F (401°F*), nickel brazed: 752°F

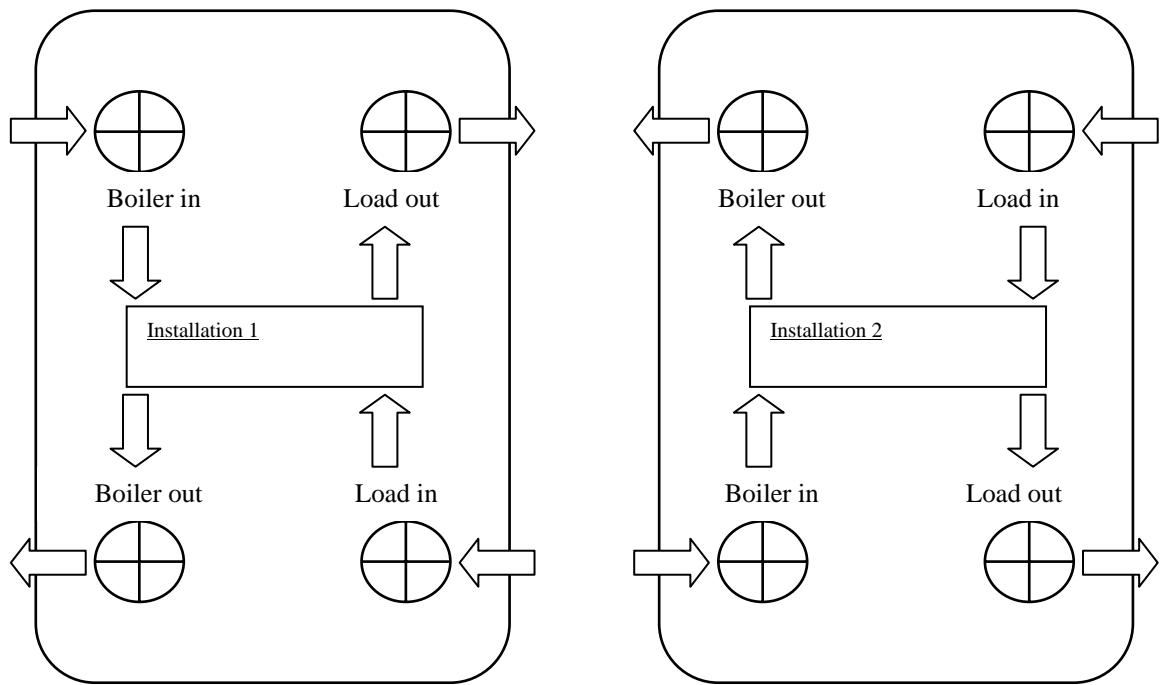

Minimum Working Temperature: copper brazed -319°F

Plate and Frame Series

SEC is a Canadian Heat Exchanger Company providing our customers with courteous professional service, economical heat transfer solutions and equipment second to none in performance, quality and price.

In order, to meet the requirements of your industry, our experienced sales team will provide you with the solutions to meet your heat transfer applications. SEC Plate and Frame Heat Exchangers have been designed and development, to the highest quality, to satisfy the most demanding duties, even on our base price units.

Working principle

All the individual plates put together form the SEC Plate and Frame Heat Exchangers "plate pack." These are always mounted with the gaskets towards the fixed frame plate. The fluids flow through these plates in alternate channels. The most common plate heat exchanger configuration is where the heated and the heating fluids pass through the heat exchanger once (in a counter flow manner). This is referred to as a single pass unit. All of the feed and discharge pipes are connected to the fixed plate. This is a particularly maintenance-friendly installation.

Close temperature differences between the fluids may demand multi-pass heat exchangers. The connection pipes are then attached to the fixed and pressure plates.

Performance:

SEC Heat Exchanger production is supported by a large engineering based manufacturer with the newest plate presses in the industry. Extensive R&D will continuing to ensure an ever larger range of units will be available to meet customer requirements.

SEC Heat Exchangers Thermal Calculations are based on advanced industry standards. SEC has extensive contacts and reference sites in North America and worldwide, which is testament to the long term quality and performance of SEC World Class Plate Heat Exchangers .

For more information on the SEC Plate and Frame Models please visit:

<http://www.secplateandframe.com/>

Construction Features

Construction Features of the Plate and Frame

Heat Exchanger Frame Material:

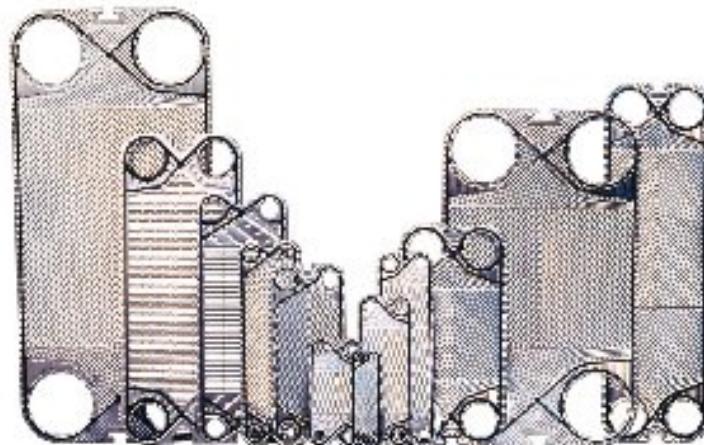

SEC Plate and Frame Heat Exchangers provides carbon or stainless steel frames for industrial, commercial, process, marine, aquaculture, HVAC applications, heat recovery, refrigeration, food and beverage processing, pharmaceutical and many other clean room applications.

All units have heavy duty frames for maximum pressure rating, depending on unit size AISI 304 stainless, in solid or clad frames are available. SEC Plate and Frame units have certifications meeting your industry standards. (ASME, ISO, DNV)

Plate Selection:

AISI 316L plates is the minimum standard quality for robust performance. Additional grades include AISI 304 Stainless, Titanium and Hastalloy.

Gasket Material:

A wide range of Nitrile, EPDM, RCB and Viton materials are available for Industrial and Food applications. EPDM is supplied as the standard gasket material, with the final selection being made for each quoted Thermal duty.

Stock:

Gaskets and Plates are kept in stock for fast delivery.

Plate Reconditioning:

A Plate Reconditioning service is available as an additional service for most Plate Heat exchanges, not just SEC units.

Full Service Gaskets:

An extensive range of gaskets covers most manufacturers.

Retro Fit Units:

We can replace existing Plate Heat Exchanges without any pipe Rework, a tremendous saving in time and capital expenditure.

24 Hour Service:

Many of our customers operate 24 hours a day, so does SEC.

Titanium Series**Titanium Series**

- superior corrosion resistance
- custom and standard designs
- industrial, marine, aquaculture

The use of titanium is gaining popularity in the heat transfer field. However, up to now the fabrication of titanium heat exchangers using traditional designs has made the resulting products expensive. The high cost of titanium makes it imperative that designs utilizing the latest heat transfer technology be considered. SEC has been successful in applying the highly efficient shell and coiled tube technology to the manufacture of titanium heat exchangers. The result is less material used to achieve the required heat transfer, thereby lowering the price significantly when compared to the outdated designs still being produced by other manufacturers.

Please send us your project requirements and we will gladly select the SEC coiled tube model best suited for your application.

**Technology and Design**

The coiled tube bundle consists of circular layers of helically corrugated tubes placed inside each other. The fluid in each layer flows in the opposite direction to the layer surrounding it, resulting in an overall criss-cross pattern. The large number of tubes packed closely together give an extensive heat transfer surface within a light compact shell. The alternate layers provide rapid uniform heating of fluids increasing the overall heat transfer coefficient. Corrugated tubes produce a turbulent flow where the desired characteristic of fluctuating velocities is achieved. This random movement of fluid particles reduces deposit buildup by performing a "scoop and lift" action. The connection locations and angle of entry is specially selected to reduce the probability of debris buildup.

Construction Features

The SEC coiled tube series of heat exchangers are fabricated as a single unit with no removable components. Coiled tube bundles are welded to a compact tube sheet located within the entry and exit connections. The cylindrical shell is terminated by hemi-spherical heads. In stock design variations include smooth or corrugated tubes, angled or 90° connections in flanged or NPT termination.

Shell and Tube Series

Shell and Tube

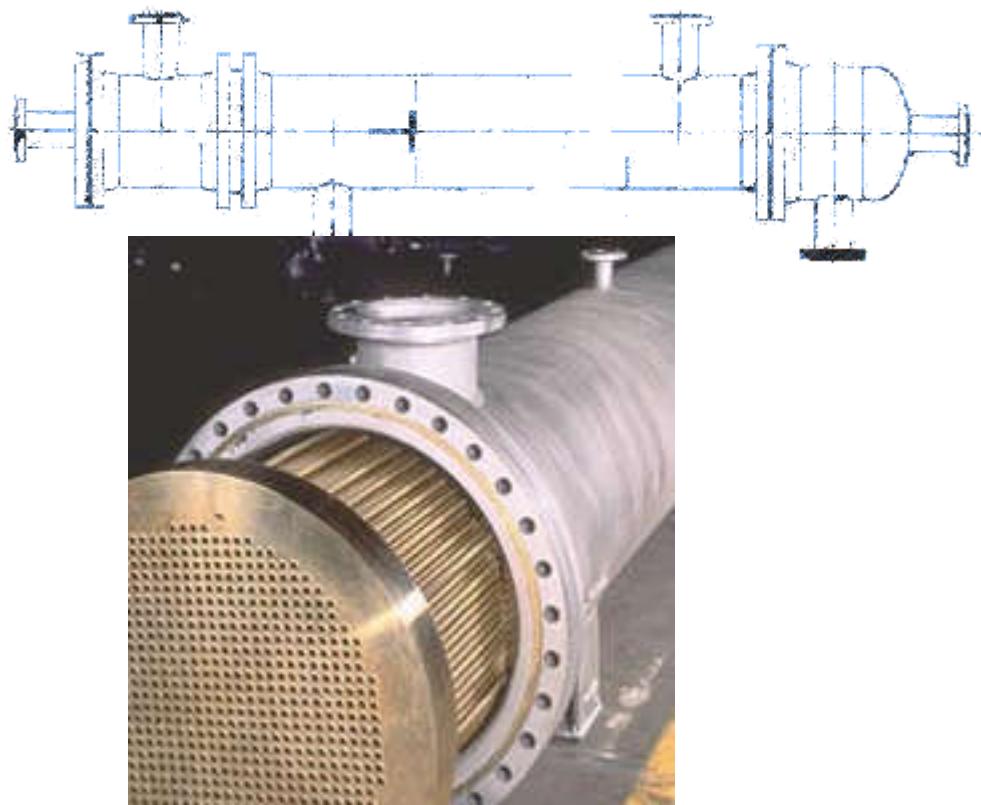

- u-tube, straight tube
- double wall
- single or multi-pass
- stainless, titanium or exotic metals

Fabricated from stainless steel or titanium, using the latest production techniques the extensive line of quality SEC shell and tube heat exchangers encompasses all modern designs and configurations.

These heat transfer devices are engineered to meet to a wide variety of applications. Every unit is designed, manufactured, and tested as per the quality requirements of the ASME code, Section VIII Division #1 and ISO 9002.

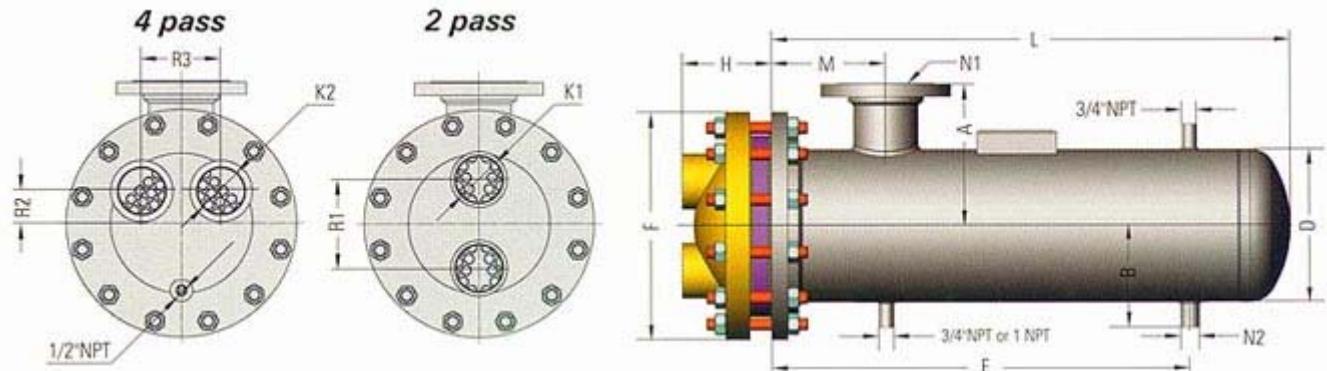

If your applications require straight or u-tube designs we provide fast, professional service. Please review our on-line [Model Sizing Charts](#) then complete our "[Quotation Form](#)". We will send; price, thermal data and delivery schedule to you within three (3) business days depending on project complexity.

1. Armstrong model names may be presented differently in specifications e.g. WS-86-2 could be listed as WS-0806-200-1

2. Armstrong heating surface areas are estimated values.

This cross reference guide is intended as an aid for product selection only, and does not imply exact interchangeability, as minor differences do exist between the To determine exact compatibility, please consult SEC's product specifications or contact the sales office.

We apologize for any errors or omissions - SEC is not responsible for the improper application of its products

Non-Metallic Series

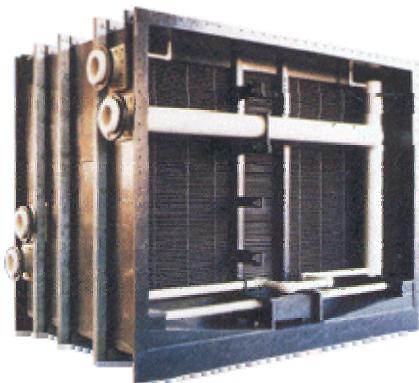

Non-Metallic

- corrosive or high purity fluids
- immersion type
- tube and plate designs
- gas/liquid designs

There are applications where a non-metallic heat exchanger is required and for these SEC has the answer. The all-plastic construction is specifically designed for heating or cooling of highly corrosive media. Standard materials of manufacture are PVDF (polyvinylidene fluoride), polypropylene, and polyethylene.

Gas/Liquid Heat Exchangers for Corrosive Gases

SEC Gas/Liquid Heat Exchangers are designed specifically for condensing and/or reheating highly corrosive gas streams. Manufactured from tough, impact-resistant PVDF, polyethylene, or PP, these exchangers are capable of handling gas stream temperatures up to 280°F. A patented process completely eliminates elastomers, seals, and mechanical joints which might produce weak areas subject to chemical attack, stress cracking, and leakage. Typical uses are condensation recovery of acidic components from gas streams generated in garbage and biological waste incineration, reheating of stack gases for plume reduction, and waste heat recovery.

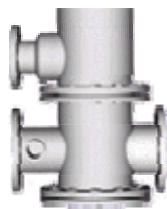

Tube Plate Heat Exchangers

These heat exchangers find applications where heat transfer between corrosive fluids is required. They are very suitable for high purity DI water, other high purity fluids, and condensation of aggressive vapors. The SEC Tube Plate Heat Exchanger is an entirely new concept in heat exchanger design. It is designed to handle most corrosive heating and cooling application when an external type heat exchanger is required. The heat transfer surface consists of a number of tube plates which are heat fused one on top of the other. The stacked tube plates form a continuous parallel series of tubes across which the shell fluid flows. The tube fluid flows within the individual tubes.

Immersion Style Heat Exchangers

The smooth surface of plastic reduces the possibility of contamination and incrustation, even in extreme applications. This enables the use of SEC Immersion Style Non-Metallic Heat Exchangers where metal exchangers would fail or require excessive maintenance. Produced by a patented process of continuous tube extrusion and manifold injection over-molding, SEC heat exchangers have tight connections between the exchanger tubes and the manifolds. There are no mechanical joints. The heat exchangers are constructed of modular elements which enable the heat exchanger to be adapted to suit a particular vessel geometry. In addition, large heat transfer surfaces are contained in a relatively small volume.

Custom Series

Custom Series

- custom fabricated
- pressures to 2500 psi
- from 1 to 30,000 sq. ft. designs
- OEM inquiries welcome

SEC Custom Heat Exchangers are available in a wide range of design variations, special materials and features to meet virtually any heat transfer requirement.

Utilizing leading edge fabrication processes, SEC offers heat transfer solutions for non-traditional applications. We have recently been involved in producing products for the fuel cell, district energy, and aquaculture industries, among others.

All heat transfer designs are produced to the ASME Code Section VIII Division 1, and ISO 9002.

Due to the complex nature of many custom designs, we suggest you contact us to discuss your project requirements.

SEC Oil Coolers

SEC Oil Coolers are manufactured and marketed by SEC Heat Exchangers. SEC is a Canadian owned and operated company based in Prince Edward Island Canada. SEC is a supplier of oil coolers to the performance racing industry, Nascar and many other forms of motor sports. SEC is also a major O.E.M. supplier.

SEC oil coolers improve the life and performance of your engine. Put simply, the closer to optimum temperature an engine's oil runs, the longer the engine will run.

Your engine oil is designed to operate within a range of temperatures. Exceeding the desirable temperature for the oil and system reduces the performance the oil and its useable life.

SEC combines high quality materials and the latest manufacturing technology to provide you an efficient and reliable oil cooler. SEC Oil Coolers effectively reduce oil temperature to safe operating levels for maximum life from both oil and engine.

Energy Transfer Stations

Energy Transfer Stations

- custom arrays of heat transfer equipment, skid mounted
- simplifies on site installation

In response to the global demand for more sophisticated heat transfer systems, SEC custom designs quality Energy Transfer Stations.

SEC Energy Transfer Stations are an economical alternative to the high cost of on sight fabrication.

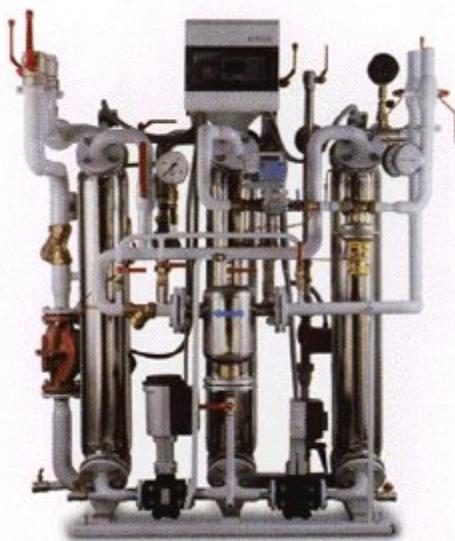

Working closely with our client we match a specific array of standard industry components with our high efficiency heat exchangers to provide the exact energy transfer capacity needed.

These skid mounted assemblies are delivered to the job where a minimal amount of piping is required to get you up and running fast.

If you are involved in an industrial process application or simply working in the HVAC field let us do all the hard work for you. Send us your project data and we will select all the components, fabricate them into one easy to deal with package, and ship it directly to your plant.

Please request literature on this or on any of the SEC products for more information.
